Flamboyant Matthew Cannonbridge was touched by genius, the most influential mind of the 19th century, a novelist, playwright his generation. The only problem is, he should never have existed, and recently divorced 21st century don Toby Judd is the one realise something is wrong with history. Cannonbridge was everywhere: he was by Lake Geneva when talk between Byron, Shelley and Mary Godwin turned to the supernatural; he was friend to the young Dickens as he laboured in the blacking factory; he was of note to visit Wilde in prison. His extraordinary life spanned a century. But as the world prepares to toast the bicentenary Cannonbridge's most celebrated work, Judd's discovery leads him on a breakneck chase across the English canon and country realisation that the spectre of Matthew Cannonbridge, planted so seamlessly into the heart of the 19th century, might not be buried after all...

Noise pollution is one of the factors that affect the quality of life of the general population, especially in urban areas, where the noise levels are often high due to the presence of numerous sources, such as transport infrastructures, activities production and commercial areas, entertainment venues and other sound sources which, although temporary, such as construction sites and outdoor music events, affect general noise levels. Even if noise is one of the oldest pollutants referred to in history, for years, the problem of noise pollution has been often considered less important than others related to the environment, such as air pollution, water pollution, and waste management. The regulations in force to contain the noise have become increasingly stringent as each individual is constantly exposed to noise and often the noise is treated just as a scourge of modern society. Making noise is becoming easier and cheaper each day, but just the opposite for controlling it. Deeper studies are needed to understand the core of current noise problems; new materials and techniques are needed to control them. This book is a combination of theory and practice based on the latest research. The studies in this book range from evaluation methods for the perception of noise and outline forecast criteria that can be integrated with applications for acoustic mapping as well as the use of innovative techniques and materials for its abatement. The main purpose of this book, organized in 8 chapters, is to provide an overview of the recent studies in this field and the applications in different research studies. The authors, contributing to the success of this book, provide a series of practical applications of their recent studies aimed at the reduction of noise in different environments. The editors would like to thank all the authors who, through their studies and research, have accepted our invitation to share recent discoveries in this field with the scientific community.

Your life is unlimited, and no one, including yourself, has the power to contain your potential - That is a central theme by M. J. Scott in *Power Steering 2*, a sequel to the book that introduced seekers of highest destiny to trust in their intuitive senses. In *Power Steering 2*, the author continues the analogy of "power steering" as the intuitive force inside us that facilitates our journeys in life. In her compilation of thematic, short essays, M. J. Scott awakens us to notice coincidences and chance encounters and happenings, and consider these as subtle messaging from God. She takes us along on her personal trip in life. Many of the essays describe incidents as they occur for her, and through them we discover beauty, kindness, peace, joy and pathways to higher calling. M. J. has lived a life of encouragement to others. She shows the reader that the power steering of intuition may let you sense and feel the life of a total stranger. Your smallest encouragements to them may be life-changing. *Power Steering 2* is an important continuing of the guidance in the first book to lives of more blessed destinies.

Mercedes Lackey's magical Elemental Masters series recasts familiar fairy tales in a richly-imagined alternate Victorian world For seventeen years, Marina Roeswood had lived in an old, rambling farmhouse in rural Cornwall in the care of close friends of her wealthy, aristocratic parents. As the ward of bohemian artists in Victorian England, she had grown to be a free thinker in an environment of fertile creativity and cultural sophistication. But the real core of her education was far outside societal norms. For she and her foster parents were Elemental Masters of magic, and learning to control her growing powers was Marina's primary focus. But though Marina's life seemed idyllic, her existence was riddled with mysteries. Why, for example, had she never seen her parents, or been to Oakhurst, her family's ancestral manor? And why hadn't her real parents, also Elemental Masters, trained her themselves? That there was a secret about all this she had known from the time she had begun to question the world around her. Yet try as she might, she could get no clues out of her guardians. But Marina would have answers to her questions all too soon. For with the sudden death of her birth parents, Marina met her new guardian—her father's eldest sister Arachne. Aunt Arachne exuded a dark magical aura unlike anything Marina had encountered, a stifling evil that seemed to threaten Marina's very spirit. Slowly Marina realized that her aunt was the embodiment of the danger her parents had been hiding her from in the backwoods of Cornwall. But could Marina unravel the secrets of her life in time to save herself from the evil that had been seeking her for nearly eighteen years?
