This book explores the construct of reading comprehension by means of two main test methods. Research methods like the think aloud protocol and eye tracking are employed to tap into test-takers' cognitive processes while engaged in input text meaning building, and in test tasks. The book is the first systematic attempt to explore test-takers' cognitive processes through the control of test methods, and presents findings in visualized form including processing route maps and eye fixation heat maps. It offers readers essential support with "digging into" and analyzing data that has to date remained difficult to access.

In a mixed-method tradition that

privileges the quantitative, leading qualitative researcher Janice Morse breaks new ground by arguing the importance of research designs for which the primary component is qualitative, and contains either a quantitative or a qualitative supplemental strategy. Using a variety of examples and visual prompts, Morse convincingly demonstrates that such designs allow novice researchers to obtain answers more quickly and with more certainty. Her book provides clear and concise explanations making even complex research designs understandable to the beginning researcher; argues for the importance of primary qualitative designs due to their theoretical strength; stresses the importance of using goal-directed actions and analyses that do not violate the assumptions of either qualitative or quantitative inquiry.

This book provides a useful guide for researchers, reviewers, and consumers who are charged with judging the quality of qualitative studies.

This groundbreaking book introduces an innovative new perspective on mixed method grounded theory methodology (MM-GTM) by conceptualizing it holistically as a distinct, qualitatively driven methodology that appreciates the integrity of each of the methods it embraces. This practical and accessible text advocates for using MM-GTM in a way that promote meaningful interaction between qualitative and quantitative data during analysis. Its principal contribution is to provide a set of research tools to develop or refine a multi-faceted analytical framework in applied fields in the social and behavioral sciences, including nursing. Used as either a resource or a textbook in a survey course about research methods, the text references dozens of examples about how a dialectical exchange between different sources of data can be built into core grounded theory procedures, including
