In a divided world, empathy is not the solution, it is the problem. We think of empathy - the ability to feel the suffering of others for ourselves - as the ultimate source of all good behaviour. But while it inspires care and protection in personal relationships, it has the opposite effect in the wider world. As the latest research

in psychology and neuroscience shows, we feel empathy most for those we find attractive and who seem similar to us and not at all for those who are different, distant or anonymous. Empathy therefore biases us in favour of individuals we know while numbing us to the plight of thousands. La storia di Carly si sta ripetendo... Il presentimento che ha accompagnato Cris durante tutta la serata della sua festa di compleanno è forse qualcosa di più di un semplice eco che le rimbomba in testa? E a chi appartiene lo sguardo assassino che ha intravisto mentre un'auto si scagliava a tutta velocità nella sua direzione? La verità sta per venire a galla, e non sarà facile da accettare. Quando Cris viene a conoscenza del mistero che Cam e gli amici le hanno tenuto nascosto è sconvolta e ferita. Tuttavia, proprio mentre le cose sembrano sistemarsi, un imprevisto fa crollare il mondo di Cris, obbligandola a compiere un'ultima, importantissima, scelta...

The Negro Motorist Green Book

The author of the acclaimed Proust and the Squid follows up with a lively, ambitious, and deeply informative book that considers the future of the reading brain and our capacity for critical thinking, empathy, and reflection as we become increasingly dependent on digital technologies. A decade ago, Maryanne Wolf's Proust and

the Squid revealed what we know about how the brain learns to read and how reading changes the way we think and feel. Since then, the ways we process written language have changed dramatically with many concerned about both their own changes and that of children. New research on the reading brain chronicles these changes in the brains of children and adults as they learn to read while immersed in a digitally dominated medium. Drawing deeply on this research, this book comprises a series of letters Wolf writes to us—her beloved readers—to describe her concerns and her hopes

about what is happening to the reading brain as it unavoidably changes to adapt to digital mediums. Wolf raises difficult questions, including: Will children learn to incorporate the full range of "deep reading" processes that are at the core of the expert reading brain? Will the mix of a seemingly infinite set of distractions for children's attention and their quick access to immediate, voluminous information alter their ability to think for themselves? With information at their fingertips, will the next generation learn to build their own storehouse of knowledge, which could impede the ability to make

analogies and draw inferences from what they know? Will all these influences, in turn, change the formation in children and the use in adults of "slower" cognitive processes like critical thinking, personal reflection, imagination, and empathy that comprise deep reading and that influence both how we think and how we live our lives? Will the chain of digital influences ultimately influence the use of the critical analytical and empathic capacities necessary for a democratic society? How can we preserve deep reading processes in future iterations of the reading brain? Who are the

"good readers" of every epoch? Concerns about attention span, critical reasoning, and over-reliance on technology are never just about children—Wolf herself has found that, though she is a reading expert, her ability to read deeply has been impacted as she has become, inevitably, increasingly dependent on screens. Wolf draws on neuroscience, literature, education, technology, and philosophy and blends historical, literary, and scientific facts with down-to-earth examples and warm anecdotes to illuminate complex ideas that culminate in a proposal for a biliterate reading brain. In this unique volume, twelve pioneers of historical archaeology offer reminiscences of the early part of their respective careers, circa 1920 to 1940. Each scholar had to overcome numerous biases held by historians and archaeologists-thus each chapter documents a step in the field's march from a marginal to a mainstream discipline. The book makes for facinating reading for archaeologists, anthropologists, and historians of science, and reminds us of the words of C.H. Fairbanks: "what is

George Orwell set out 'to make political writing into an art', and to a wide extent this aim shaped the future of English literature – his descriptions of authoritarian regimes helped to form a new vocabulary that is fundamental to understanding totalitarianism. While 1984 and Animal Farm are amongst the most popular classic novels in the English language, this new series of Orwell's essays seeks to bring a wider selection of his writing on politics and literature to a new readership.
