It is well known that improvements in space and aviation are the leader of today's technology, and the aircraft is the most important product of aviation. Because of this fact, the books on aircraft are always at the center of interest. In most cases, technologies designed for the aerospace industry are rapidly extending into other areas. For example, although composite materials are developed for the aerospace industry, these materials are not often used in aircraft. However, composite materials are utilized significantly in many different sectors, such as automotive, marine and civil engineering. And materials science in aviation, reliability and efficiency in aircraft technology have a major importance in aircraft design.

Fascist Italy's ultimate defeat was foreordained. It was a pygmy among giants, and Hitler's failure to destroy the Soviet Union in 1941 doomed all three Axis powers. But Italy's defeat was unique; the only asset that it conquered - briefly - with its own unaided forces in the entire Second World War was a dusty and useless corner of Africa, British Somaliland. And Italy's forces dissolved in 1943 almost without resistance, in stark contrast to the grim fight to the last cartridge of Hitler's army or the fanatical faithfulness unto death of the troops of Imperial Japan. This book tries to understand why the Italian armed forces and Fascist regime were so remarkably ineffective at an activity - war - central to their existence. It approaches the issue above all from the perspective of military culture, through analysis of the services' failure to imagine modern warfare and through a topical structure that offers a social-cultural, political, military-economic, strategic, operational, and tactical cross-section of the war effort.

Economics: Private and Public Choice is an aid for students and general readers to develop a sound economic reasoning. The book discusses several ways to economic thinking including six guideposts as follows: (i) scarce goods have costs; (ii) Decision-makers economize in their choices; (iii) Incentives are important; (iv) Decision-makers are dependent on information scarcity; (v) Economic actions can have secondary effects; and (vi) Economic thinking is scientific. The book explains the Keynesian view of money, employment, and inflation, as well as the monetarist view on the proper macropolicy, business cycle, and inflation. The book also discusses consumer decision making, the elasticity of demand, and how income influences demand. The text analyzes costs and producer decisions, the firm under pure competition, and how a competitive model functions. The book explains monopoly, and also considers the high barriers that prevent entry such as legal barriers, economies of scale, and control over important resources. The author also presents comparative economic systems such as capitalism and socialism. This book can prove useful for students and professors in economics, as well as general readers whose works are related to public service and planning in the area of economic development.

The Book of Squares by Fibonacci is a gem in the mathematical literature and one of the most important mathematical treatises written in the Middle Ages. It is a collection of theorems on indeterminate analysis and equations of second degree which yield, among other results, a solution to a problem proposed by Master John of Palermo to Leonardo at the Court of Frederick II. The book was dedicated and presented to the Emperor at Pisa in 1225. Dating back to the 13th century the book exhibits the early and continued fascination of men with our number system and the relationship among numbers with special properties such as prime numbers, squares, and odd numbers. The faithful translation into modern English and the commentary by the translator make this book accessible to professional mathematicians and amateurs who have always been intrigued by the lure of our number system.

The third edition of the text is in full colour for the first time, with comprehensive and highly referenced coverage of communication theory continuing to be balanced with extensive practical skill activities. Both text and its associated digital resources are written in a user-friendly, accessible style and are enhanced by informative illustrations.

"I was immediately mesmerized . . . as brilliant as it is haunting." —Toni Morrison In 1940s apartheid South Africa, Milla de Wet discovers a child abandoned in the fields of her family farm. Ignoring the warnings of friends and family, Milla brings the girl, Agaat, into her home. But the kindness is fleeting, as Milla makes Agaat her maidservant and, later, a nanny for her son. At turns cruel and tender, this relationship between a wealthy white woman and her Black maidservant is constantly fraught and shaped by a rigid social order. Decades later, Milla is confined to her bed with ALS, and is quickly losing her ability to communicate. Her family has fallen apart, her country is on the brink of change, and all she has left are her memories—and a reckoning with the only person who remains by her side: Agaat. In complex and devastating ways, the power shifts between the two women, mirroring the historic upheavals happening around them and revealing a shared lifetime of hopes, sacrifices, and control. Hailed as an international masterpiece, Marlene van Niekerk's Agaat is a haunting and deeply layered saga of resilience, loyalty, betrayal, and how the passage of time cannot heal all wounds.
