Stargazing's too much fun to leave to astronomers. In these inviting pages, "Night Sky Guy" Andrew Fazekas takes an expert but easygoing approach that will delight would-be astronomers of all levels. Essential information, organized logically, brings the solar system, stars, and planets to life in your own backyard. Learn about the dark side of the moon, how to pick Mars out of a planetary lineup, and which kinds of stars twinkle in your favorite constellations. Hands-on tips and techniques for observing with the naked eye, binoculars, or a telescope help make the most out of sightings and astronomical phenomena such as eclipses and meteor showers. Photographs and graphics present key facts in an easy-to-understand format, explaining heavenly phenomena such as black holes, solar flares, and supernovas. Revised to make skywatching even easier for the whole family, this indispensable guide shines light on the night sky--truly one of the greatest shows on Earth!*

*This comprehensive nature field guide introduces you to constellations and weather, rocks and minerals, plants and wildflowers, and trees and shrubs.*

*Planisphere and Starfinder is a practical guide to finding your way around the night sky. It demystifies astronomy and introduces basic stargazing techniques, enabling you to find and recognize objects with ease. A section on the Solar System shows you how to observe the Moon, planets, and other bodies such as comets and asteroids. It also gives advice on looking at eclipses and meteor showers. The central section of the book is a detailed guide to the constellations. Each entry in the guide is illustrated with a clear star chart, supported by graphics that show where in the world the constellation can be seen and explain the symbolic meaning of its star pattern. The key features for observation are presented in an accessible list supported by advice on how best to observe them. The final section is a month-by-month guide to the night sky. A double-page spread for each month highlights the features on view, while a large-scale chart shows you where to find the planets and a table of special events lists the dates of Moon phases, eclipses, and the best times to see the planets.*
