Book Excerpt: My memory of hospitals I have known, and my mental picture of yours made up from piecing together the memories of various ones, the recollection of the feelings I had in them, etc. (intellect). What you already know. Speculation (intellect), the speculation based on my knowledge of other schools (memory which is intellect). A desire (emotion) that all nurses should know psychology. Child calling on street. Recognition of sound (intellect) and pleasant perception of his voice (emotion). Desire to throw work aside and go for a tramp on this gorgeous day. Emotion, restrained by stronger emotion of interest in work at hand, and intellect, which tells me that this is a work hour--and will, which orders me to pay attention to duties at hand. So all the phenomena of mental life are included in feelings, thoughts, and volitions which accompany every minute of my waking life, and probably invade secretly every second of my sleeping life. Ever try to keep track of the difference between dysphagia and dysphasia and aphagia and aphasia? Having trouble remembering where to put the ekg leads? Is your patient's rhythm a second degree, type I or a second degree type II? Nursing school can be a pain in the butt. Once you think you've got something down, another subject is thrown at you. It's nearly impossible to keep track of everything as a nursing student. You think you know your stuff, but have a hard time getting it out from your brain when it's needed. I feel your pain. I was in your shoes once and had the same problems in nursing school. I found mnemonics to be a life-saver for exams, clinicals, and questioning from preceptors. Some of the memory tricks in this book are well-known, but most of them were made up over the years by yours truly. Mnemonics are not meant to teach you the information. Rather, they are meant to jog your memory, which already holds the information somewhere deep inside. These are an aid, not an education. Inside, you'll find simple mnemonic devices that can be drawn from at a moment's notice. The idea isn't to retain the entire book after reading it for the first time. Instead, use it as a guide in your journey through nursing school and beyond. Whenever you come to a nursing topic you need reinforcement on, see if there's something here that might be able to help you. 100 + Memory Tricks to Crush the Nursing School and Trigger Your Nursing Memory

The Principles and Practice of Nurse Education

Fast Facts and Practice Questions

Annual Review of Nursing Research, Volume 17, 1999

So you chose to become a nurse. Why? Most people answer that question with a cliché "I want to help people." Maybe that's the same answer you just gave. That's not the wrong answer, yet it's also not the whole picture. Though good intentions are commendable, grand hopes of changing the world are far removed from the daily reality of nursing. And what it means to change the world is a lot less glamorous than you might like to think. Kim R. Edwards has spent forty years of her life as a nurse. She was a nurse's aide for four years, a student nurse for two years, and on staff at Tallahassee Memorial HealthCare for 34 years. Her long-term experience as a nurse has inspired her to share her personal ups and downs in hopes that they will encourage, validate, and teach you throughout your own journey as a nurse. This book of heartfelt stories from the countless hours Kim has spent at her patients' bedside will teach you: How to cope with the challenges you will face when working with seasoned nurses How to be a valuable team player That you are human--and that's okay How to learn from your mistakes and cope with heartbreak If you're nervous, excited, and a little terrified to begin your nursing career, read Behind My Stethoscope to laugh, cry, and learn invaluable lessons straight from the heart of a nurse with over four decades of experience walking that path ahead of you. This life you've chosen will be worth it.

You'll learn how to prepare for the NCLEX® and your nursing career, how to get good grades, how to deal with failure, how to improve oral and written reports, and much more. A must-have for every nursing student! Endorsed by the National Student Nurses Association (NSNA). Written by a nationally known motivational speaker and nurse, the book's down-to-earth approach uses humor and clever analogies to clearly teach the information you need to know. Uses the analogy of a cross-country road trip to help you see the relationships between different aspects of nursing school, as well as give you a finite view of its duration and end result. Inspirational quotes throughout offer wisdom and encouragement from fellow nursing students and graduates. The appendix lists numerous diverse resources you'll find useful before, during, and after nursing school. Electronic Age Information covers distance learning, online courses, and podcasts, facilitating your success both in today's electronic classroom and with the advancing technology in nursing. A special NCLEX® chapter (Chapter 29: Are We There Yet? Almost.) provides you with the tools you need to prepare for and pass the NCLEX®. Updated statistics and information on the emerging trends of the workforce keep you current with what's happening in the world outside nursing and help you make educated choices during nursing school. Three chapters are devoted to diversity in today's workforce and the non-traditional student. Thorough coverage of ADN, BSN, and RN-BSN programs (program prerequisites, differences, and more) helps you make informed decisions about your choice of nursing programs. An appendix of Online Resources provides quick and easy access to web sites that will assist both students and graduates with continued study and real-world advice.

This book is a practical, user friendly text designed specifically for those undertaking dissertations or research projects in the final year of nursing programmes. Research forms a central part of nursing degrees, and final year dissertations are often based on literature searching and writing research project proposals. This book addresses the need for a clear and practical text to guide students from the initial stage of deciding on a research topic, completing a literature review and designing their research, through to choosing data collection and analysis methods, and finally writing up their project proposal or dissertation.

Brunner & Suddarth's Textbook of Canadian Medical-surgical Nursing

Many patients with stroke, head injuries or dementia suffer severe memory impairment and in many cases improvement may fail to occur. This book, first published in 1984 followed by this second edition in 1992, offers practical guidelines to the problems and is supported by a discussion of theory about memory systems and functioning. It should enable therapists and psychologists to recognize, understand, assess and manage memory problems arising from injury, accident or infection of the brain. The authors are well-known for their interest in memory and memory therapy. Topics covered in this text include: the relationship between memory and practice, assessment, methods for improving memory, organization of memory therapy, selection of appropriate treatments for individual patients, role of the microcomputer in memory rehabilitation, use of drugs in stimulating memory, development of programmes to improve attention and the treatment of the memory-impaired in groups. This second edition has an update on drugs, electronic aids and assessment procedures, with further evidence of the effectiveness of memory therapy. This book would have been an asset for those professionals involved in the rehabilitation of the impaired memory at the time and can still be of value today.
