This book is the first book-length analysis of investor accountability under general and customary international law, international human rights law, international environmental law, international humanitarian law, as well as international investment law. International investment law is currently facing growing criticisms for its failure to address corruption, abuse, environmental damage, and other forms of investor misconduct. Reform initiatives range from the rejection of international law as a governing regime for investors, to the dramatic overhaul of investment treaties that supposedly enable investor overprotection, to the creation of a multilateral international instrument that would enable the litigation of claims against errant businesses before an international tribunal. Whether these initiatives succeed in disciplining investors remains to be seen. What these initiatives undeniably show however, is that change is warranted to counteract this lopsided investors' international law. Each chapter in the book addresses a different and underexplored dimension of investor accountability, thus offering a novel and consolidated study of international law. The book will be of immense assistance to legal practitioners, academics and policy makers involved in the design, drafting, application and reform of various international instruments addressing investor accountability.

Realities and the Meaning of 'Blackness') this book is an engaging collection of chapters, varied in critical content and theoretical standpoints, linked by their intellectual stimulation and fascination with African American life, and questioning how and to what extent American culture and society is 'past' race. The chapters are united by an intertwined sense of progression and regression which addresses the diverse dynamics of continuity and change that have defined shifts in the African American experience over the past twenty years.

With this superbly written, meticulously researched, and concisely argued study, Rogers has helped deepen our understanding of the Confederate civilian experience.

Drawing from a wealth of historic documents and personal papers, William Warren Rogers, Jr., provides a fascinating and detailed political, economic, social, and commercial history of Montgomery from 1860 to 1865.

His account begins with an examination of daily life in the city before the war began-how slaves outnumbered whites, how an unvarnished frontier atmosphere prevailed on the streets despite citizens' claims to refinement, how lush crops of corn and cotton grew in fields right up to the city limits, and how class divisions were distinct and immovable. Rogers arranges his

material topically, covering the events that led to the decision for secession and Montgomery's heady days as the Confederacy's first capital; the industrialization of the city's war effort as it became a hub of activity and served as a military post; the city's business patterns and administration as it attempted to promote the Confederacy and defend itself from federal forces; and the plight of the small group of Unionists who inhabited Montgomery through the war. Rogers concludes with chapters examining the situation in Montgomery as the Confederacy unraveled and the city fell to Union troops. The Montgomery experience offers a microcosm of life on the Confederate home front and demonstrates that citizens generally experienced the same hopes, deprivations, and tragedies that other Southerners did at this time. Rogers's well-written, comprehensive history of the wartime city makes an original contribution to Civil War homefront and community studies that should appeal to general readers and scholars alike.

Presenting spectacular photographs of astronomical objects of the southern sky, all taken by author Stephen Chadwick, this book explores what peoples of the South Pacific see when they look up at the heavens and what they have done with this knowledge. From wives killing brothers to emus rising out of the desert and great canoes in the sky, this book offers the perfect blend of science, tradition and mythology to bring to life the most famous sights in the heavens above the southern hemisphere. The authors place this starlore in the context of contemporary understandings of astronomy. The night sky of southern societies is as rich in culture as it is in stars. Stories, myths and legends based on constellations, heavenly bodies and other night sky phenomena have played a fundamental role in shaping

the culture of pre-modern civilizations throughout the world. Such starlore continues to influence societies throughout the Pacific to this day, with cultures throughout the region – from Australia and New Zealand in the south to New Guinea and Micronesia in the north - using traditional cosmology as a means of interpreting various aspects of everyday life.

This is the first comprehensive volume to explore and engage with current trends in Geographies of Media research. It reviews how conceptualizations of mediated geographies have evolved. Followed by an examination of diverse media contexts and locales, the book illustrates key issues through the integration of theoretical and empirical case studies, and reflects on the future challenges and opportunities faced by scholars in this field. The contributions by an international team of experts in the field, address theoretical perspectives on mediated geographies, methodological challenges and opportunities posed by geographies of media, the role and significance of different media forms and organizations in relation to socio-

spatial relations, the dynamism of media in local-global relations, and in-depth case studies of mediated locales. Given the theoretical and methodological diversity of this book, it will provide an important reference for geographers and other interdisciplinary scholars working in cultural and media studies, researchers in environmental studies, sociology, visual anthropology, new technologies, and political science, who seek to understand and explore the interconnections of media, space and place through the examples of specific practices and settings.

After the Act describes the aftermath of the recent removal under LASPO of public funding from legal services in family matters other than in defined cases such as child protection and domestic abuse. Through analysis of the policy context, interviews with key players, observation of services provided by lawyers, students, lay support workers and the advice sector, the authors outline the work being done and the skills being used in a range of settings. The book raises questions not only about access to family justice, but about the role of law in family matters in an increasingly post-legal society. Fragmentation of the market in the new services offering

information, initial advice, online or alternative dispute resolution - but rarely ongoing casework - raises questions about where costs fall and how quality can be assured. Many of these services are forms of private ordering, where outcomes are hard to assess. If neither the state nor the individual can afford full legal services where the best interests of any child involved are of paramount importance, and lawyers negotiate to make best use of the resources available, perhaps it is time to consider using lawyers differently, with lay support, to solve problems before they become disputes.

Kimberly White examines how the idea of criminal responsibility was produced, organized, and legitimized in and through institutional structures such as remissions, trial, and post-trial procedures; identity politics of race, character, citizenship, and gender; and overlapping narratives of mind-state and capacity. She points to the subtle but deeply influential ways in which common sense about crime, punishment, criminality, and human nature shaped the boundaries of expert knowledge at every stage of the judicial process. Negotiating Responsibility provides an essential point

of reference from which to evaluate current criminal
law practices and law reform initiatives in Canada.

Space, Place and the Future of Learning

There is persuasive evidence suggesting we are on the brink of human-induced ecological disaster that could change life on Earth as we know it. There is also a general consensus among scientists about the pace and extent of global ecological decay, including a realisation that humans are central to causing the global socio-ecological crisis. This new epoch has been called the Anthropocene. Considering the many benefits that constitutional environmental protection holds out in domestic legal orders, it is likely that a constitutionalised form of global environmental law and governance would be better able to counter the myriad exigencies of the Anthropocene. This book seeks to answer this central question: from the perspective of the

Anthropocene, what is environmental constitutionalism and how could it be extrapolated to formulate a global framework? In answering this question, this book offers the first systematic conceptual framework for global environmental constitutionalism in the epoch of the Anthropocene.

"Southeast Asia offers unique opportunities for the comparative analysis of democratization. The Routledge Handbook of Southeast Asian Democratization provides a comprehensive overview of the development of democracy in the region and shows that political and structural factors differ strikingly across countries. Combining theory and case studies, it is structured in three major sections: Social segments and change processes - Institutions - Country cases and democratic guises. Contributing to on-going debates in the field, this interdisciplinary reference work explores the value systems, social structures and institutions which can affect democratization. At the same time, it tracks the pattern of fragile unfolding and gradual stabilization of

democracy, as well as its resultant cost, rollback or even breakdown in the region. Bringing together over 25 key international experts in the field, this cutting-edge Handbook is designed to disaggregate, then order, the many variables that punctuate Southeast Asia's socio-political and economic terrain, and to produce a detailed account of the mixed fortunes of democracy in the region"--

Each volume is filled with essential information, from.

The whole landscape of space use is undergoing a radical transformation. In the workplace a period of unprecedented change has created a mix of responses with one overriding outcome observable worldwide: the rise of distributed space. In the learning environment the social, political, economic and technological changes responsible for this shift have been further compounded by

constantly developing theories of learning and teaching, and a wide acceptance of the importance of learning as the core of the community, resulting in the blending of all aspects of learning into one seamless experience. This book attempts to look at all the forces driving the provision and pedagogic performance of the many spaces, real and virtual, that now accommodate the experience of learning and provide pointers towards the creation and design of learning-centred communities. Part 1 looks at the entire learning universe as it now stands, tracks the way in which its constituent parts came to occupy their role, assesses how they have responded to a complex of drivers and gauges their success in dealing with renewed pressures to perform. It shows that what is required is innovation within the spaces and integration between them. Part 2 finds many examples of innovation in evidence across the world – in schools, the higher and further education campus and in business and cultural spaces – but an almost total absence of integration. Part 3 offers a model that redefines the learning landscape in terms of learning outcomes, mapping spatial requirements and activities into a detailed mechanism that will achieve the best outcome

at the most appropriate scale. By encouraging stakeholders to creating an events-based rather than space-based identity, the book hopes to point the way to a fully-integrated learning landscape: a learning community. Starlore and Astronomy of the South Pacific Mad Men

From the opening credits that feature a silhouette falling among skyscrapers, Mad Men transcended its role as a series about the Madison Avenue advertising industry to become a modern classic. For seven seasons, Mad Men asked viewers to contemplate the 1960s anew, reassessing the tumultuous era's stance on women's rights, race, war, politics, and family relationships that comprise the American Dream. Set in the heart of the twentieth century, the show brought to light how deeply we still are connected to that age. The result is a show that continually asks us to rethink our own families, lives, work, and ethical beliefs as we strive

for a better world. In *Mad Men: A Cultural History*, M. Keith Booker and Bob Batchelor offer an engaging analysis of the series, providing in-depth examinations of its many themes and nostalgic portrayals of the years from Camelot to Vietnam and beyond. Highly regarded cultural scholars and critics, Booker and Batchelor examine the show in its entirety, presenting readers with a deep but accessible exploration of the series, as well as look at its larger meanings and implications. This cultural history perspective reveals *Mad Men*'s critical importance as a TV series, as well as its role as a tool for helping viewers understand how they are shaped by history and culture. As a showcase in America's new "golden age of television," *Mad Men* reveals the deep hold history and nostalgia have on viewers, particularly when combined with stunning visuals and intricate writing and storylines. With this volume as their guide, readers will enjoy contemplating the show's place among the most lauded popular culture touchstones of the twenty-first century. As it engages with ideas central to the American experience—from the evolution of gender roles to family dynamics and workplace relationships—*Mad Men: A Cultural History* brings to life the significance of this profound yet entertaining series.
