*Online counselling is becoming increasingly popular, but working with clients through the internet presents new challenges for practitioners. Is it really safe and confidential? How can clients build rapport with their therapist without face-to-face contact? Can feelings really be expressed through text? This book gives invaluable advice on the technical and therapeutic aspects of online work from two seasoned experts. Clear, supportive and very practice-friendly, Online Counselling explores the ways counsellors can use the internet to augment their practice. Readers are taken through a wide range of situations, from setting up contracts and creating a secure working environment to understanding and using emoticons. Drawing on their considerable experience as online counsellors and supervisors, the authors explain how to create an online working alliance with clients through emails, instant messaging and live chat-room sessions. In particular, the book: Uses language that demystifies the jargon of the internet Tackles ethical and legal issues of working online Explores the use of image and sound online Shows how different theoretical approaches can be applied to online practice Includes step-by-step exercises, memorable examples and a handy glossary.*

*This book is for every teacher or trainer—whose computer skills may be limited—who wants to understand the Internet educationally, and use it in his or her courses. As institutional pressures mount to integrate the Internet into teaching, this book provides a framework and a hands-on introduction to what's involved, whether it's adapting materials and teaching styles for the Web, or designing a virtual course. This book provides: • an introduction to the key educational concepts needed to adapt teaching methods and materials to the medium of the Internet • an introduction to both basic and advanced Internet skills—from using e-mail to collaborative conferencing • a framework for harnessing the Internet to achieve educational goals, and successfully exploiting its resources, features and applications to promote effective learning The framework starts from the premise that teachers should progressively apply Internet technology as their skills and confidence develop. It develops the concept of "augmented" teaching styles—supplementing traditional teaching with Internet based options; demonstrates how to use modules as the building blocks for Web-based learning; and shows how to use the Internet to deliver individualized learning, by enhancing personal communication between teacher and student, and addressing the diversity of learning styles. The book abounds with inspiring and thought-provoking examples of Internet course materials developed by a wide variety of teachers and trainers, including modules and forms created by the authors who have extensive experience in delivering Internet-based courses. A glossary of terms and directory of Internet sites and resources complete the book, which is also supported by a related Web site.*

Presents a comprehensive treatment of issues related to the inception, design, implementation and reporting of large-scale education assessments. In recent years many countries have decided to become involved in international educational assessments to allow them to ascertain the strengths and weaknesses of their student populations. Assessments such as the OECD's Programme for International Student Assessment (PISA), the IEA's Trends in Mathematics and Science Study (TIMSS) and Progress in International Reading Literacy (PIRLS) have provided opportunities for comparison between students of different countries on a common international scale. This book is designed to give researchers, policy makers and practitioners a well-grounded knowledge in the design, implementation, analysis and reporting of international assessments. Readers will be able to gain a more detailed insight into the scientific principles employed in such studies allowing them to make better use of the results. The book will also give readers an understanding of the resources needed to undertake and improve the design of educational assessments in their own countries and regions. Implementation of Large-Scale Education Assessments: Brings together the editors' extensive experience in creating, designing, implementing, analysing and reporting results on a wide range of assessments. Emphasizes methods for implementing international studies of student achievement and obtaining highquality data from cognitive tests and contextual questionnaires. Discusses the methods of sampling, weighting, and variance estimation that are commonly encountered in international large-scale assessments. Provides direction and stimulus for improving global educational assessment and student learning Is written by experts in the field, with an international perspective. Survey researchers, market researchers and practitioners engaged in comparative projects will all benefit from the unparalleled breadth of knowledge and experience in large-scale educational assessments gathered in this one volume.

The Human-Dimensions of Human-Computer Interaction commences a non-technical discussion about everyday computer usage and deals with the human-dimension or social context of effective HCI. It brings forward many of the hidden complexities of the human-dimensions of HCI, and owes to the educative nature of the techno-saga. The first three chapters are designed to set the background for the duality of the human/machine dimensions of HCI. Chapter four leaves the machine-side of the techno-saga to re-enter the usability context. Consequently, in this chapter people's techno-interactions are combined with the machine-side of the HCI equation to evaluate effective solutions that try to achieve techno-satisfying outcomes. While it still maintains the human side, chapter five covers cognitive performance. Chapter six becomes quite demonstrative, drawing away from the more usual linguistics to speak to the reader through a series of metaphorical human-dimensioned HCI models. Chapter seven brings the reader back to earth to concentrate again on the human-side of the HCI equation; this time to speak about expectations that people have in seeking techno-solutions to everyday issues. Chapter eight returns the focus to the machine-side; emphasizing that a balanced approach is necessary for achieving effective HCI, as this book would not be complete without a section for dealing with gender and how it relates, if at all, to HCI.
