with them disturbing news. There's a horse called Tornado Warning that's winning all the races, with times faster than anyone's ever seen. What could this mean? Emily, Joel, Paelen, Pegasus, and the sphinx Alexis return to Earth to investigate—and discover a CRU plot to clone Olympians and Nirads using DNA retrieved from their previous time in the human realm. The CRU has already created dozens of Nirad warriors, Dianas, Paelens, Cupids, and Pegasuses. Now they want to create their own Emily clone—even if the original is killed in the process. Can Emily and her friends put a stop to the CRU's plans before Jupiter finds out and carries through on his own threat to destroy the Earth?

A number of disparate but interconnected forces such as deregulation and globalization, rapid advances in communications technology and the rise in the power of the consumer and civil society have now combined to bring corporate responsibility to prominence in many corporate boardrooms. In this information age, the ramifications of not addressing

best practice in environment, workplace, marketplace and community could range from bad press coverage to complete market exclusion. These are perilous times for the social construct of modern capitalism. In today's society successful companies will increasingly be those that recognize that they have responsibilities to a range of stakeholders that go beyond compliance with the law. If in the past the focus was on enhancing shareholder value, now it is on engaging stakeholders for long-term value creation. This does not mean that shareholders are not important, or that profitability is not vital to business success, but that in order to survive and be profitable a company must engage with a range of

stakeholders whose views may vary greatly. If in the past corporate social responsibility was simply seen as profitability plus compliance plus philanthropy, now responsible corporate citizenship means companies being more aware of and understanding the societies in which they operate. This means senior executives and managers being able to deal with a wide range of issues including greater accountability, human rights abuses, sustainability strategies, corporate governance codes, workplace ethics, stakeholder consultation and management. The aim and scope of Perspectives on Corporate Citizenship is to help capture and distil these and other emerging trends in terms of content,

The Great Lakes region of Africa has seen dramatic changes. After a decade of war, repression, and genocide, loosely allied regimes have replaced old-style dictatorships. The Path of a Genocide examines the decade (1986-97) that brackets the 1994 genocide in Rwanda. This collection of essays is both a narrative of that event and a deep reexamination of the international role in addressing humanitarian issues and complex emergencies. Nineteen donor countries and

seventeen multilateral organizations, international agencies, and international nongovernmental organizations pooled their efforts for an in-depth evaluation of the international response to the conflict in Rwanda. Original studies were commissioned from scholars from Uganda, Rwanda, Zaire, Ethiopia, Norway, Great Britain, France, Canada, and the United States. While each chapter in this volume focuses on one dimension of the Rwanda conflict, together they tell the story of this unfolding genocide and the world's response. The Path of a Genocide offers readers a

Some say that the universes within the multiverse allow for different mathematics or even for different metamathematical logic. This book provides a satisfying intellectual exploration of front-edge advances in contemporary cosmology.

"This account of how a once reviled theory, Baye's rule, came to underpin modern life is both approachable and engrossing" (Sunday Times). To its adherents,

it is an elegant statement about learning from experience. To its opponents, it is subjectivity run amok. In the first-ever account of Bayes' rule for general readers, Sharon Bertsch McGrayne explores this controversial theorem and the generations-long human drama surrounding it. McGrayne traces the rule's discovery by an 18th century amateur mathematician through its development by French scientist Pierre

Simon Laplace. She reveals why respected statisticians rendered it professionally taboo for 150 years—while practitioners relied on it to solve crises involving great uncertainty and scanty information, such as Alan Turing's work breaking Germany's Enigma code during World War II. McGrayne also explains how the advent of computer technology in the 1980s proved to be a game-changer. Today, Bayes' rule is used everywhere

Electrostatic discharge (ESD) is one of the most prevalent threats to electronic components. In an ESD event, a finite amount of charge is transferred from one object (i.e., human body) to another (i.e., microchip). This process can result in a very

In the United States, broad study in an array of different disciplines â€"arts, humanities, science, mathematics, engineeringâ€" as well as an in-depth study within a special area of interest, have been defining

characteristics of a higher education. But over time, in-depth study in a major discipline has come to dominate the curricula at many institutions. This evolution of the curriculum has been driven, in part, by increasing specialization in the academic disciplines. There is little doubt that disciplinary specialization has helped produce many of the achievement of the past century.

Researchers in all academic disciplines have been able to delve more deeply into their areas of expertise, grappling with ever more specialized and fundamental problems. Yet today, many leaders, scholars, parents, and students are asking whether higher education has

moved too far from its integrative tradition towards an approach heavily rooted in disciplinary "silos". These "silos" represent what many see as an artificial separation of academic disciplines. This study reflects a growing concern that the approach to higher education that favors disciplinary specialization is poorly calibrated to the challenges and opportunities of our time.
