Accounting Principles Part 1, 5th Canadian Edition

An irresistible story from Kasie West that explores the timeless question What do you do when you fall for the person you least expect? When Autumn Collins finds herself accidentally locked in the library for an entire weekend, she doesn't think things could get any worse. But that's before she realizes that Dax Miller is locked in with her. Autumn doesn't know much about Dax except that he's trouble. Between the rumors about the fight he was in (and that brief stint in juvie that followed it) and his reputation as a loner, he's not exactly the ideal person to be stuck with. Still, she just keeps reminding herself that it is only a matter of time before Jeff, her almost-boyfriend, realizes he left her in the library and comes to rescue her. Only he doesn't come. No one does. Instead it becomes clear that Autumn is going to have to spend the next couple of days living off vending-machine food and making conversation with a boy who clearly

wants nothing to do with her. Except there is more to Dax than meets the eye. As he and Autumn at first grudgingly, and then not so grudgingly, open up to each other, Autumn is struck by their surprising connection. But can their feelings for each other survive once the weekend is over and Autumn's old life, and old love interest, threaten to pull her from Dax's side?

This textbook is intended to give an introduction to neuroscience for students and researchers with no biomedical background. Primarily written for psychologists, this volume is a digest giving a rapid but solid overview for people who want to inform themselves about the core fields and core concepts in neuroscience but don't need so many anatomical or biochemical details given in "classical" textbooks for future doctors or biologists. It does not require any previous knowledge in basic science, such as physics or chemistry. On the other hand, it contains chapters that do go beyond the issues dealt with in most neuroscience textbooks: One chapter about mathematical modelling in neuroscience and another about "tools of neuroscience" explaining important methods. The book is divided in two parts. The first part presents core concepts in neuroscience: Electrical Signals in the Nervous System Basics of Neuropharmacology Neurotransmitters The second part presents an overview of the neuroscience fields of special interest for psychology: Clinical Neuropharmacology Inputs, Outputs and Multisensory Processing Neural Plasticity in Humans Mathematical Modeling in Neuroscience Subjective Experience and its Neural Basis The last chapter, "Tools of Neuroscience" presents important methodological approaches in neuroscience with a special focus on brain imaging. Neuroscience for Psychologists aims to fill a gap in the teaching literature by providing an introductory text for psychology students that can also be used in other social sciences courses, as well as a complement in courses of neurophysiology, neuropharmacology or similar in careers outside as well as inside biological or medical fields. Students of data sciences, chemistry and physics as well as engineering interested in neuroscience will also profit from the text.
