

Physical Science Grade 10 June 2013

New Scientist magazine was launched in 1956 "for all those men and women who are interested in scientific discovery, and in its industrial, commercial and social consequences". The brand's mission is no different today - for its consumers, New Scientist reports, explores and

human endeavour set in the context of society and culture.

Study & Master Physical Sciences Grade 10 has been especially developed by an experienced author team for the Curriculum and Assessment Policy Statement (CAPS). This new and easy-to-use course helps learners to master essential content and skills in Physical Sciences. The innovative Teacher's File includes: * guidance on the teaching of each lesson for the year * answers to all activities in the Learner's Book * assessment guidelines * photocopiable templates and resources for the teacher

Physical Sciences, Grade 10

Study & Master Physical Sciences Grade 12 has been especially developed by an experienced author team for the Curriculum and Assessment Policy Statement (CAPS). This new and easy-to-use course helps learners to master essential content and skills in Physical Sciences.

Proceedings of the Open Meetings of the Working Groups on Physical Sciences of the Twenty-First Plenary Meeting of COSPAR, Innsbruck, Austria, 29 May - 10 June 1978

The American Synthetic Rubber Research Program

Life Sciences, Grade 10

Hearings, Ninety-second Congress, First Session, on H.R. 4743 (superseded by H.R. 7960).

This history of the government-funded synthetic rubber research program (1942-1956) offers a rare analysis of a cooperative research program geared to the improvement of existing products and the creation of new ones. The founders of the program believed the best way to collaboration among corporations, universities, and the federal government. Morris concludes that, in fact, the effort was ultimately a failure and that vigorous competition proves the best way to stimulate innovation. Government programs, like the rubber research program, are author contends, than creating wholly new ones.

Study & Master Life Sciences Grade 10 has been especially developed by an experienced author team for the Curriculum and Assessment Policy Statement (CAPS). This new and easy-to-use course helps learners to master essential content and skills in Life Sciences. The comprehensive Learner's Book includes: * an expanded contents page indicating the CAPS coverage required for each strand * a mind map at the beginning of each module that gives an overview of the contents of that module * activities throughout that help develop learners' science knowledge and skills as well as Formal Assessment tasks to test their learning * a review at the end of each unit that provides for consolidation of learning * case studies that link science to real-life situations and present balanced views on sensitive issues. * 'information' boxes

providing interesting additional information and 'Note' boxes that bring important information to the learner's attention

Teachers' Guide to Child Development

Cospar Space Research, Volume XIX covers the proceedings of the Open Meetings of the Working Groups on Physical Sciences of the 21st Plenary Meeting of COSPAR, held in Innsbruck, Austria, from May 29 to June 10, 1978, focusing on the developments in space research. The contributions concentrate on remote sensing, middle atmosphere, ionosphere, magnetosphere, and materials science in space. The selection first offers information on global development of space research, including weather and climate, material sciences in space, planets, sun, stars, magnetosphere, and high energy astrophysics. The book then takes a look at the spectral characteristics of surface phenomena and their impact on the design of an optoelectronic multispectral system; use of weather satellite data in the evaluation of water resources; and atmospheric and surface radiation balance as identified from satellite data. The compilation discusses the assimilation of non-simultaneous satellite and conventional meteorological data using statistical weights; annual variation and variability of meteorological parameters in the stratosphere and mesosphere; and physical properties affecting the existence of small particles in the mesosphere. The book also focuses on the determination of density scale-height profiles, geomagnetic effects in the exosphere, and gravity waves and tidal winds in the equatorial thermosphere. The selection is a dependable source of data for readers interested in space research.
