The field of fingerprinting for personal identification and

criminal investigation is progressing at a rapid rate. Numerous research projects are devoted to fingerprint detection techniques and identification issues, and recent debate focuses on the admissibility of fingerprint evidence in US courts. In light of these events, as well as the previous lack of one volume that brings together the scientific and legal aspects of this discipline, the time is ideal for an easily accessible resource that gathers together and analyzes the latest findings and techniques related to fingerprint science. Fingerprints and Other Ridge Skin Impressions features the insight of a recognized team of authorities, including contributors from a key institution for forensic research. Chapters cover all aspects of the subject including the formation of friction ridges on the skin, the deposition of latent prints, the detection and enhancement of such marks, recording of fingerprint evidence, and fingerprint identification itself. Recent advances in statistical interpretation, fingerprint detection techniques, and computer technology are also discussed in detail. This practical techniques manual is an ideal text for practitioners working in

the field of fingerprint detection and identification, as well as anyone studying forensic science at the undergraduate and postgraduate levels. There is also sufficient background material for legal professionals and police in need of an introduction to the critical subject of fingerprinting.

Fingerprints of the Gods

“Fans of romantic suspense will fall hard for this story” from the #1 New York Times-bestselling author of the Sisterhood novels (A Love So True). Pediatrician Lorrie Ryan has been looking forward to camping with her seven-year-old nephew, Davey. It’s a chance to let the fragile, sheltered boy spend time away from his nervous, overprotective parents, and have the adventure he’s always wanted. But in the lush woods, Lorrie never imagines they are not alone—or that their idyllic

trip will soon become a chilling nightmare of survival . . . In one terrifying moment, Davey disappears. The local police find no trace of him, and a desperate Lorrie turns to the one man who can help: FBI agent Stuart Sanders. Now, the hunt is on for a child growing weaker by the minute—and a cruel predator whose twisted game of cat-and-mouse has only just begun . . . “A heart-pounding romantic thriller . . . as fast paced and exciting as always.”—Booklist Praise for Fern Michaels and her novels “Prose so natural that it seems you are witnessing a story rather than reading about it.”—Los Angeles Sunday Times “Michaels just keeps getting better and better with each book . . . She never disappoints.”—RT Book Reviews “A knockout story.”—Publishers Weekly

In recent years, biometrics has developed rapidly with its worldwide applications for daily life. New trends and novel developments have been proposed to acquire and process many different biometric traits. The ignored challenges in the past and potential problems need to be thought together and deeply integrated. The key objective of the book is to keep up

with the new technologies on some recent theoretical development as well as new trends of applications in biometrics. The topics covered in this book reflect well both aspects of development. They include the new development in forensic speaker recognition, 3D and thermo face recognition, finger vein recognition, contact-less biometric system, hand geometry recognition, biometric performance evaluation, multi-biometric template protection, and novel subfields in the new challenge fields. The book consists of 13 chapters. It is divided into four sections, namely, theory and method, performance evaluation, security and template protection, and other applications. The book was reviewed by editors Dr. Jucheng Yang and Dr. Shanjuan Xie. We deeply appreciate the efforts of our guest editors: Dr. Norman Poh, Dr. Loris Nanni, Dr. Dongsun Park, Dr. Sook Yoon and Ms. Congcong Xiong, as well as a number of anonymous reviewers. Could the story of mankind be far older than we have previously believed? Using tools as varied as archaeo-astronomy, geology, and computer analysis of ancient myths,

Graham Hancock presents a compelling case to suggest that it is. “A fancy piece of historical sleuthing . . . intriguing and entertaining and sturdy enough to give a long pause for thought.”—Kirkus Reviews In Fingerprints of the Gods, Hancock embarks on a worldwide quest to put together all the pieces of the vast and fascinating jigsaw of mankind’s hidden past. In ancient monuments as far apart as Egypt’s Great Sphinx, the strange Andean ruins of Tihuanaco, and Mexico’s awe-inspiring Temples of the Sun and Moon, he reveals not only the clear fingerprints of an as-yet-unidentified civilization of remote antiquity, but also startling evidence of its vast sophistication, technological advancement, and evolved scientific knowledge. A record-breaking number one bestseller in Britain, Fingerprints of the Gods contains the makings of an intellectual revolution, a dramatic and irreversible change in the way that we understand our past—and so our future. And Fingerprints of God tells us something more. As we recover the truth about prehistory, and discover the real meaning of ancient myths and monuments, it becomes apparent that a

warning has been handed down to us, a warning of terrible cataclysm that afflicts the Earth in great cycles at irregular intervals of time—a cataclysm that may be about to recur.

“Readers will hugely enjoy their quest in these pages of inspired storytelling.”—The Times (UK)

The idea of The Fingerprint Sourcebook originated during a meeting in April 2002. Individuals representing the fingerprint, academic, and scientific communities met in Chicago, Illinois, for a day and a half to discuss the state of fingerprint identification with a view toward the challenges raised by Daubert issues. The meeting was a joint project between the International Association for Identification (IAI) and West Virginia University (WVU). One recommendation that came out of that meeting was a suggestion to create a sourcebook for friction ridge examiners, that is, a single source of researched information regarding the subject. This sourcebook would provide educational, training, and research information for the international scientific community.

An extraordinary and almost unprecedented discussion has arisen within the last few weeks as to the use of "Finger Clues." The chief occasion for this curious clamor seems to have been the faulty use of this new way of fingerprints in the case of the two brothers Stratton, who were hanged for a double murder at Deptford, known as the "Mask" murders. Mr. James P. Budden, the well-known criminal solicitor, who was for the defense, asked Inspector Collins, " Can you give me the name of any medical or legal authority who takes any notice of this so-called science?" - " I do not know any." - [Standard, 26th April, 1905.] In what is headed as " A Strong Letter," Mr. Budden wrote to the Birmingham Gazette and Express (July 12th) giving some additional details of interest. He says: " On this point a remark made by Inspector Collins, of the Scotland Yard Fingerprint Department, when I cross-examined him is significant. I asked him whether his finger-print system, of which he appeared in court as an expert, was an exact science. He replied that it was. '

Then, if it is an exact science, ' I said, ' it must have a name, ' and I asked him for the name of his science. He said he did not know it. It was then suggested to him that it had been called 'dactylography' or ' dactyloscopy ' - terms of Greek origin - and he said, ' Oh, yes! that's a German name for it.' I ask," continues Mr. Budden, "whether the user of the finger-print system against prisoners should be left in the hands of non-scientific men." Mr. Budden also states that his views on "the use of finger-prints as evidence against an accused person are the same as those expressed by Mr. Justice Channell in his masterly charge to the jury in the Stratton Case. I think the opinion of a judge of such wide experience and authority well worth following by an ordinary individual." I was privileged with a seat at the solicitor's table during that important trial, and was afforded an opportunity of scrutinizing the exhibits, commented on in another part of this work. Just before the trial I had publicly expressed somewhat similar views to those held by Mr. Budden, and happen to know that the learned judge having been made acquainted with my opinion as to the necessity of scientific training for experts, entirely agreed with that view and expressed himself to that effect before his remarkable charge was delivered to the jur
