Norman Hall's Asvab Preparation Book

Newly revised to specifically address Microsoft Excel 2019, this book is a step-by-step, exercise-driven guide for students and practitioners who need to master Excel to solve practical biological and life science problems. Excel is an effective learning tool for quantitative analyses in biological and life sciences courses. Its powerful computational ability and graphical functions make learning statistics much easier than in years past. Excel 2019 for Biological and Life Sciences Statistics capitalizes on these improvements by teaching students and professionals how to apply Excel 2019 to statistical techniques necessary in their courses and work. Each chapter explains statistical formulas and directs the reader to use Excel commands to solve specific, easy-to-understand biological and life science problems. Practice problems are provided at the end of each chapter with their solutions in an appendix. Separately, there is a full practice test (with answers in an appendix) that allows readers to test what they have learned. This new edition offers a wealth of new practice problems and solutions, as well as updated chapter content throughout.

This is the first book to show the capabilities of Microsoft Excel to teach biological and life sciences statistics effectively. It is a step-by-step exercise-driven guide for students and practitioners who need to master Excel to solve practical science problems. If understanding statistics isn't your strongest suit, you are not especially mathematically-inclined, or if you are wary of computers, this is the right book for you. Excel, a widely available computer program for students and managers, is also an effective teaching and learning tool for quantitative analyses in science courses. Its powerful computational ability and graphical functions make learning statistics much easier than in years past. However, Excel 2010 for Biological and Life Sciences Statistics: A Guide to Solving Practical Problems is the first book to capitalize on these improvements by teaching students and managers how to apply Excel to statistical techniques necessary in their courses and work. Each chapter explains statistical formulas and directs the reader to use Excel commands to solve specific, easy-to-understand science problems. Practice problems are provided at the end of each chapter with their solutions in an appendix. A key element in evaluation, performance measurement, is the subject of this volume, a substantially revised version of How to Measure Achievement of the original Kit. A new feature is the discussion of current issues in performance testing, including those related to legal challenges and test validity. The evaluator's role in performance measurement is discussed, as is the suitability of existing performance measures. Where no appropriate test exists, the authors give step-by-step reliable and valid one. The analysis and reporting of data gained from performance testing is also described.

This is a learning/revision guide intended to help history GCSE students to remember key information. Each topic has a double page spread with diagrams. It also has GCSE-style questions for exam practice that have progress indicators to show degree of difficulty.

This self-guided introductory biology lab manual features a full range of activities that show how basic biological concepts can be applied to a wide variety of plants, animals, and microorganisms. It is designed to help readers (including those who are academically underprepared) acquire the basic knowledge needed to make informed decisions about biological questions that arise in everyday life, develop the problem-solving skills that will lead to success in a competitive job market, and learn to work effectively and productively as a member of a team. Focuses on the scientific method -- requiring readers to develop hypotheses, set up experiments, collect data, record their data in graphs and charts, and draw conclusions from their experimental results. Offers opportunities to transfer content knowledge to real life applications through questions interwoven into each activity. Each laboratory includes a brief discussion of background information, hints for solving problems, important safety information, Comprehension Checks and Self Tests (with answers). For anyone beginning a study of biology, including those who are academically underprepared or from an ESL background.

Asking Questions in Biology is all about scientific discovery. Biology students must be able to analyse data and produce high quality reports, but before this they need to work out exactly what it is they are trying to discover. Asking Questions in Biology begins with the often overlooked (yet crucial) skill of asking the right question, in the right way. It then moves on to present the tools and techniques required to gather data, analyse this data and finally to present this data (either orally or in a formal report).

This book focuses on developing effective learning techniques to help readers excel in school, in their careers, and throughout their lives as lifelong learners. Unlike traditional study skills books, this one emphasizes how people learn effectively by involvingthem in the active process of mastering their mental abilities and their personal confidence.The authors outline getting ready to learn through self-awareness, goal setting and time management, as well as, critical and creative thinking, targeting success in school through reading and studying, listening and memory, taking notes and test taking, quantitative learning, researching and writing, gathering and communicating ideas, as well as, creating life success.For individuals interested in effective learning techniques.

An innovative introduction to ecology and evolution This unique textbook introduces undergraduate students to quantitative models and methods in ecology, behavioral ecology, evolutionary biology, and conservation. It explores the core concepts shared by these related fields using tools and practical skills such as experimental design, generating phylogenies, basic statistical inference, and persuasive grant writing. And contributors use examples from their own cutting-edge research, providing diverse views to engage students and broaden their understanding. This is the only textbook on the subject featuring a collaborative "active learning" approach that emphasizes hands-on learning. Every chapter has exercises that enable students to work directly with the material at their own pace and in small groups. Each problem includes data presented in a rich array of formats, which students use to answer questions that illustrate patterns, principles, and methods. Topics range from Hardy-Weinberg equilibrium and population effective size to optimal foraging and indices of biodiversity. The book also includes a comprehensive glossary. In addition to the editors, the contributors are James Beck, Cawas Behram Engineer, John Gaskin, Luke Harmon, Jon Hess, Jason Kolbe, Kenneth H. Kozak, Robert J. Robertson, Emily Silverman, Beth Sparks-Jackson, and Anton Weisstein. Provides experience with hypothesis testing, experimental design, and scientific reasoning Covers core quantitative models and methods in ecology, behavioral ecology, evolutionary biology, and conservation Turns "discussion sections" into "thinking labs" Professors: A supplementary Instructor's Manual is available for this book. It is restricted to teachers using the text in courses. For information on how to obtain a copy, refer to:

This reference is intended for teachers who are responsible for selecting textbooks for biology or life science courses. The publication provides reviewers with a compilation of 10 biology and 7 life science textbook reviews. Using this document as a resource, teachers can save valuable time by reducing the number of books they review and pilot studies they conduct. For each textbook series, there is a description of the materials, and reviews of the student edition, the process skills in the student edition, the teachers edition, the laboratory manual, and the teachers edition of the laboratory manual. Factual inaccuracies in the materials are noted. (CW)

This guide is aimed at students interested in allied health careers, and covers science knowledge, verbal and quantitative ability, and reading comprehension based on the methods of active learning. The text guides students through a system of self-managed, self-paced study related to the AHAT. Each section offers AHPAT-style practice questions, and there is also a model examination (with answers and explanations). The appendix includes a glossary allied health careers.

Appropriate for Introductory Biology courses. This best-selling introductory text, widely praised for its lively writing style and impeccable scientific presentation, has been revised to reflect the changing dynamics of introductory biology. Emphasizing concepts over facts and critical thinking over memorization, Life on Earth presents the dynamic processes at work in biology and conveys the relevance and excitement of this discipline to students.
