Learn to: save time dealing with unreasonable customers reduce intensity of customer anger increase safety of employees and customers reduce stress related to angry customers convey image of constructive caring to government customers even when they are abusive set limits for angry customers and enforce them for mutual benefit Government and public sector departments and employees often deal with angry, irate, upset, manipulative, and aggressive citizens and customers, due to their regulatory responsibilities. Often employees are under-trained to deal with angry customers, leaving them at risk, while government agencies look uncaring and cold. Angry, unsatisfied clientele eat up hours of staff time. Government departments CAN provide excellent customer service. A critical step is learning how to defuse angry people so that the agency and the customer work TOGETHER. Defusing Hostile Customers -- A Self-Instructional Workbook For Public Sector Employees is a "seminar in a book" and contains an amazing collection of specific phrases and actions that can be learned by any public sector employee, drawn from modern understanding of psychology of aggression and psycholinguistics. There are over 80 specific tactics to be applied, and most chapters contain hands-on exercises and "homework," with key answers provided at the back of the book. Here's just a taste of the content: Government Context Nature of Hostile Behavior How Hostile Situations Escalate Principles of Defusing Art of Self-Control Starting Off Successfully Using Co-operative Language Verbal Self-Defense Techniques Acknowledgment Tactics Countering Non-Verbal Intimidation Referral Techniques Telephone Hostility Limit Setting There's even a chapter for managers and supervisors. This third edition (2010) is a unique blend of science and art not available anywhere else, and is based on the input of thousands of government employees over two decades.

Two business experts explain their Key to Renewal program and recommend that businesses striving for a "change-friendly" environment should identify current successes and pinpoint their causes System Performance Tuning answers one of the most fundamental questions you can ask about your computer: How can I get it to do more work without buying more hardware? In the current economic downturn, performance tuning takes on a new importance. It allows system administrators to make the best use of existing systems and minimize the purchase of new equipment. Well-tuned systems save money and time that would otherwise be wasted dealing with slowdowns and errors. Performance tuning always involves compromises; unless system administrators know what the compromises are, they can't make intelligent decisions. Tuning is an essential skill for system administrators who face the problem of adapting the speed of a computer system to the speed requirements imposed by the real world. It requires a detailed understanding of the inner workings of the computer and its architecture. System Performance Tuning covers two distinct areas: performance tuning, or the art of increasing performance for a specific application, and capacity planning, or deciding what hardware best fulfills a given role. Underpinning both subjects is the science of computer architecture. This book focuses on the operating system, the underlying hardware, and their interactions. Topics covered include: Real and perceived performance problems, introducing capacity planning and performance monitoring (highlighting their strengths and weaknesses). An integrated description of all the major tools at a system administrator's disposal for tracking down system performance problems. Background on modern memory handling techniques, including the memory-caching filesystem implementations in Solaris and AIX. Updated sections on memory conservation and computing memory requirements. In depth discussion of disk interfaces, bandwidth capacity considerations, and RAID systems. Comprehensive discussion of NFS and greatly expanded discussion of networking. Workload management and code tuning. Special topics such as tuning Web servers for various types of content delivery and developments in cross-machine parallel computing For system administrators who want a hands-on introduction to system performance, this is the book to recommend. **MATHEMATICAL EXCURSIONS, Third Edition, teaches students that mathematics is a system of knowing and understanding our surroundings. For example, sending information across the Internet is better understood when one understands prime numbers; the perils of radioactive waste take on new meaning when one understands exponential functions; and the efficiency of the flow of traffic through an intersection is more interesting after seeing the system of traffic lights represented in a mathematical form. Students will learn those facets of mathematics that strengthen their quantitative understanding and expand the way they know, perceive, and comprehend their world. We hope you enjoy the journey. This is the seventh book of problems and solutions from the Mathematics Competitions. Contest Problem Book VII chronicles 275 problems from the American Mathematics Contests (AMC 12 and AMC 10 for the years 1995 through 2000, including the 50th Anniversary AHSME issued in 1999). Twenty-three additional problems with solutions are included. A Problem Index classifies the 275 problems in to the following subject areas: Algebra, Complex Numbers, Discrete Mathematics (including Counting Problems), Logic, and Discrete Probability, Geometry (including Three Dimensional Geometry), Number Theory (including Divisibility, Representation, and Modular Arithmetic), Statistics, and Trigonometry. For over 50 years many excellent exams have been prepared by individuals throughout our mathematical community in the hope that all secondary school students will have an opportunity to participate in these problem solving and enriching mathematics experiences. The American Mathematics Contests are intended for everyone from the average student at a typical school who enjoys mathematics to the very best student at the most special school.
