The Community Vocational Transition Center
A Bibliography of Computer Management
**The job market continues to change. Highly skilled
and specialized workers are in demand. Traditional
education cannot meet all the needs to create
specialty skill workers. Certification provides up-to-
date training and development while promoting
individual or professional skills and knowledge in a
focused manner. Certification as a way of
continuing professional eduction can also be more
cost effective.**
**This monograph outlines a model procedure for
developing and running a community vocational
transition center that would assist workers in**

making various planned and unplanned vocational transitions throughout their lives by offering a comprehensive array of vocational assessment and transition services. The first chapter addresses the question of whether a community vocational center can be competitively positioned. The next three chapters discuss the steps entailed in conducting a feasibility study, profiling center services, and establishing a center. Chapter 5 describes the following specific assessment services that can be offered to clients: literacy, abilities/skills, physical demands, interests, work behaviors and attitudes, vocational aptitude, psychological, and comprehensive. The sixth chapter describes the following five services related to referral and placement: occupational exploration, job/training matching, job-seeking skills, vocational and educational counseling, and living skills assessment. Some possible service combinations are explored in chapter 7. Chapter 8 is devoted to the service process, and chapter 9 deals with program evaluation. A 10-page reference list is followed by appendixes including an initial interview form and addresses of developers of tests, assessments, and work samples. (MN)

For more than 40 years, Computerworld has been the leading source of technology news and information for IT influencers worldwide. Computerworld's award-winning Web site (Computerworld.com), twice-monthly publication, focused conference series and custom research form the hub of the world's largest global IT media network.

Customers who place a standing order for the Tests in Print series or the Mental Measurements Yearbook series will receive a 10% discount on every volume. To place your standing order, please call 1-800-848-6224 (in the U.S.) or 919-966-7449 (outside the U.S.). Designed to complement the Mental Measurements Yearbooks, Tests in Print fills a pressing need for a comprehensive bibliography of all commercially available English language tests in print. Although these volumes are useful in and of themselves, their maximum usefulness requires the availability and use of the Mental Measurements Yearbooks. Although information on available tests and specific test bibliographies is valuable, the greatest service which Tests in Print can perform is to encourage test users to choose tests more wisely by consulting the MMY test reviews, test reviews from journals, and the professional literature on the construction, use, and validity of the tests being considered. Although information on available tests and specific test bibliographies is valuable, the greatest service which Tests in Print can perform is to encourage test users to choose tests more wisely by consulting the MMY test reviews, the excerpted test reviews from journals, and the professional literature on the construction, use, and validity of the tests being considered. Tests in Print V contains information on over four thousand instruments. Along with a brief

description, entries include population, scoring, pricing, publisher information, and a reference list of professional literature citing articles relevant to individual instruments. Indexes of titles, classified subjects, names, and scores, as well as a publishers directory and index are included, with notations for out-of-print instruments. Information is given for tests in a wide range of areas, including education, psychology, counseling, management, health care, career planning, sociology, personnel, child development, social science, and research. Tests in Print V also provides a comprehensive index to the Mental Measurements Yearbook by directing readers to the appropriate volume or volumes for reviews of specific tests.

The Boost C++ Libraries

Revises the information in the second edition and

presents over 700 new or revised tests. The Psychology section contains 20 subsections, Education has 54 subsections, and Business has 13 subsections. Does not contain reliability, validity, and normative data. Use the complementary "Test Critiques" series for this information.

Based on the results of a third survey, the engineering and programming characteristics of 222 different electronic digital computing systems are given. The data are presented from the point of view of application, numerical and arithmetic characteristics, input, output and storage systems, construction and checking features, power, space, weight, and site preparation and personnel requirements, production records, cost and rental rates, sale and lease policy, reliability, operating experience, and time availability, engineering modifications and improvements and other related topics. An analysis of the survey data, fifteen comparative tables, a discussion of trends, a revised bibliography, and a complete glossary of computer engineering and programming terminology are included.

The second edition of The Boost C++ Libraries

introduces 72 Boost libraries that provide a wide range of useful capabilities. They help you manage memory and process strings more easily. They provide containers and other data structures that go well beyond what the standard library offers. They make it easy to build platform-independent network applications. Simply put, these 72 libraries greatly expand your C++ toolbox. The second edition contains more than 43O examples. All examples are as short as possible, but they are complete, so you can compile and run them as is. They show you what the Boost libraries offer and give you a head start on using the libraries in your own applications. The goal of this book is to increase your efficiency as a C++ developer and to simplify software development with C++. The Boost libraries introduced in this book will help you write less code with fewer bugs and finish projects faster. You code will be more concise and self-explanatory and more easily adapted when requirements change. The second edition is based on the Boost libraries 1.55.O and 1.56.O with the latter version having been released in August 2O14. The examples are based on C++11 and have been tested with Visual Studio 2O13, GCC 4.8 and Clang 3.3 on various platforms. For Boost libraries which were incorporated into the C++11 standard library, differences between Boost and the standard library are highlighted. The Boost libraries are one of the most important and influential open source C++ libraries. Their

source code is available under a permissive
free software license. Several Boost
libraries have been incorporated into the
C++11 standard library. The Boost libraries
are developed and supported by the Boost
community - a worldwide developer community
with a strong interest in pushing C++
boundaries further.

Dr. Dobb's Journal

*Software Metrics is the first book to survey its subject,
measuring its present extent, describing its characteristic
features, and indicating directions of potential expansion.
This book reviews the present understanding of the history of
software and establishes an agenda for further research. By
exploring this current understanding, the authors identify
the fundamental elements of software. The problems and
questions addressed in the book range from purely technical
to societal issues. Thus, the articles presented offer a fresh
view of this history with new categories and interrelated
themes, comparing and contrasting software with artefacts in
other disciplines, so as to ascertain in what ways software is
similar to and different from other technologies. This volume
is based on the international conference "Mapping the
History of Computing: Software Issues", held in April 2000*

at the Heinz Nixdorf Museums Forum in Paderborn, Germany.
