This second edition of the remarkable Inside Lives (expanded with a chapter on the last years of the life cycle) provides a perspective on the relationship between psychoanalytic theory and the nature of human development. Following the major developmental phases from infancy to old age, the author lucidly explores the vital aspects of experience which promote mental and emotional growth and those which impede it. In bringing together a wide range of clinical, non-clinical and literary examples, it offers a detailed and accessible introduction to contemporary psychoanalytic thought and provides a personal and vivid approach to the elusive question of how the personality develops.

One Sunday morning in 1993 a 16-year-old girl named Eliza Ciaps goes missing from a church in the centre of Potenza, Italy. Shortly before her disappearance, Elisa had met Danilo Restivo, a strange local boy with a fetish for cutting women's hair on the back of buses. Elisa's family are convinced that Restivo is responsible for their daughter's disappearance, but he is protected by local big-wigs: by his Sicilian father, by a doctor with links to organised crime, by a priest who had vices of his own. Years went by and Elisa's family could find only false leads. 2002, and Restivo is now living in Bourne mouth. In November that year, his neighbour is found murdered, with strands of her own hair in her hands. Once again the police are at a loss to pin anything on him. It's not until 2010, when Elisa's decomposed body is found in the church where she went missing, that the two cases are linked and Restivo is finally dealt with. Blood on the Altar combines a gripping true crime case with Jones's deep understanding of Italian culture - the impunity it offers to the powerful - he so expertly demonstrated in his bestseller: The Dark Heart of Italy.

NATIONAL BESTSELLER • The gripping story of Elizabeth Holmes and Theranos—one of the biggest corporate frauds in history—a tale of ambition and hubris set amid the bold promises of Silicon Valley, rigorously reported by the prize-winning journalist. With a new Afterword. “Chilling ... Reads like a thriller ... Carreyrou tells [the Theranos story] virtually to perfection.” —The New York Times Book Review In 2014, Theranos founder and CEO Elizabeth Holmes was widely seen as the next Steve Jobs: a brilliant Stanford dropout whose startup “unicorn” promised to revolutionize the medical industry with its breakthrough device, which performed the whole range of laboratory tests from a single drop of blood. Backed by investors such as Larry Ellison and Tim Draper, Theranos sold shares in a fundraising round that valued the company at more than \$9 billion, putting Holmes’s worth at an estimated \$4.5 billion. There was just one problem: The technology didn’t work. Erroneous results put patients in danger, leading to misdiagnoses and unnecessary treatments. All the while, Holmes and her partner, Sunny Balwani, worked to silence anyone who voiced misgivings—from journalists to their own employees.

At Night All Blood is Black is a “powerful, hypnotic, and dark novel” (Livres Hebdo) of terror and transformation in the trenches of the First World War.
Alfa Ndiaye is a Senegalese man who, never before having left his village, finds himself fighting as a so-called “chocolat” soldier with the French army during World War I. When his friend Mademba Diop, in the same regiment, is seriously injured in battle, Diop begs Alfa to kill him and spare him the pain of a long and agonizing death in No Man’s Land. Unable to commit this mercy killing, madness creeps into Alfa’s mind as he comes to see this refusal as a cruel moment of cowardice. Anxious to avenge the death of his friend and find forgiveness for himself, he begins a macabre ritual: every night he sneaks across enemy lines to find and murder a blue-eyed German soldier, and every night he returns to base, unharmed, with the German’s severed hand. At first his comrades look at Alfa’s deeds with admiration, but soon rumors begin to circulate that this super soldier isn’t a hero, but a sorcerer, a soul-eater. Plans are hatched to get Alfa away from the front, and to separate him from his growing collection of hands, but how does one reason with a demon, and how far will Alfa go to make amends to his dead friend? Peppered with bullets and black magic, this remarkable novel fills in a forgotten chapter in the history of World War I. Blending oral storytelling traditions with the gritty, day-to-day, journalistic horror of life in the trenches, David Diop’s At Night All Blood is Black is a dazzling tale of a man’s descent into madness.

Imagine a killer with the infectiousness of the common cold and power of the Black Death. Imagine something so deadly that it wipes out 90% of those it touches. Imagine an organism against which there is no defence. But you don't need to imagine. Such a killer exists: it is a virus and its name is Ebola. The Hot Zone tells what happens when the unthinkable becomes reality: when a deadly virus, from the rain forests of Africa, crosses continents and infects a monkey house ten miles from the White House. Ebola is that reality. It has the power to decimate the world's population. Try not to panic. It will be back. There is nothing you can do...

Individuals who donate their blood provide a unique and precious gift in an act of human solidarity. In order to donate blood, prospective donors should be in good health and free from any infections that can be transmitted through transfusion. Most blood donors perceive themselves to be healthy, but some are unsuitable to donate blood due to the potential risk of compromising or worsening their own health or the risk of transmission of infections to patients. Blood transfusion (BTS) have a duty of care towards blood donors as well as to the recipients of transfusion. This duty of care extends to prospective donors who are deferred from donation--whether on a temporary or permanent basis--as well as those who donate blood and are subsequently found to have unusual or abnormal test results. BTS have a responsibility to confirm test results and provide information, counseling and support to enable these individuals to understand and respond to un information about their health or risk status. Counseling is part of the spectrum of care that a BTS should be able to provide to blood donors--including referral to medical practitioners or specialist clinical services. Pre-donation counseling was recognized as one element of the strategy to reduce and, if possible, prevent the donation of blood by individuals who might be at risk for HIV and other TTI including hepatitis B and C viruses as well as to inform the donor of the donation and testing of blood for HIV. Post-donation counseling was acknowledged to be a necessary element of donor management as an adjunct to informing donors of unusual or abnormal test results. Blood donor counseling by trained specialist staff is now considered to be a key component of the blood system in most countries with a well-developed blood transfusion service. It may be required at a number of stages in the blood donation process or following blood screening and should be available at any point at which the BTS has an interface with donors. In many countries, however, blood donor counseling is not yet available in a structured way. Blood Donor Counselling: Implementation Guidelines has therefore been developed to provide guidance to blood transfusion services that have not yet established donor counseling programs.

Phlebotomy uses large, hollow needles to remove blood specimens for lab testing or blood donation. Each step in the process carries risks - both for patients and health workers. Patients may be bruised. Health workers may receive needle-stick injuries. Both can become infected with bloodborne organisms such as hepatitis B, HIV, syphilis or malaria. Moreover, each step affects the quality of the specimen and the diagnosis. A contaminated specimen will produce a misdiagnosis. C errors can prove fatal. The new WHO guidelines provide recommended steps for safe phlebotomy and reiterate accepted principles for drawing, collecting blood and transporting blood to laboratories/blood banks.

The Jefferson Bible, or The Life and Morals of Jesus of Nazareth as It is formally titled, was a book constructed by Thomas Jefferson in the latter years of his life by cutting and pasting numerous sections from various Bibles as extractions of the doctrine of Jesus.
