

Ric Hochet Tome 63 La Sorcia Re Mal Aima C E

Après avoir reçu une étrange carte postale de son père par laquelle il croit déceler un appel à l'aide, Ric Hochet décide d'aller en Amérique Latine, à Varaiso. Les premières images sont de véritables cartes postales : soleil, un air de paradis. Mais bien vite, arrive la nuit : l'enfer dans les bas quartiers, le couvre-feu obligatoire...

This textbook presents the concepts and tools necessary to understand, build, and implement algorithms for computing elementary functions (e.g., logarithms, exponentials, and the trigonometric functions). Both hardware- and software-oriented algorithms are included, along with issues related to accurate floating-point implementation. This third edition has been updated and expanded to incorporate the most recent advances in the field, new elementary function algorithms, and function software. After a preliminary chapter that briefly introduces some fundamental concepts of computer arithmetic, such as floating-point arithmetic and redundant number systems, the text is divided into three main parts. Part I considers the computation of elementary functions using algorithms based on polynomial or rational approximations and using table-based methods; the final chapter in this section deals with basic principles of multiple-precision arithmetic. Part II is devoted to a presentation of "shift-and-add" algorithms (hardware-oriented algorithms that use additions and shifts only). Issues related to accuracy, including range reduction, preservation of monotonicity, and correct rounding, as well as some examples of implementation are explored in Part III. Numerous examples of command lines and full programs are provided throughout for various software packages, including Maple, Sollya, and Gappa. New to this edition are an in-depth overview of the IEEE-754-2008 standard for floating-point arithmetic; a section on using double- and triple-word numbers; a presentation of new tools for designing accurate function software; and a section on the Toom-Cook family of multiplication algorithms. The techniques presented in this book will be of interest to implementers of elementary function libraries or circuits and programmers of numerical applications. Additionally, graduate and advanced undergraduate students, professionals, and researchers in scientific computing, numerical analysis, software engineering, and computer engineering will find this a useful reference and resource. PRAISE FOR PREVIOUS EDITIONS "[T]his book seems like an essential reference for the experts (which I'm not). More importantly, this is an interesting book for the curious (which I am). In this case, you'll probably learn many interesting things from this book. If you teach numerical analysis or approximation theory, then this book will give you some good examples to discuss in class." — MAA Reviews (Review of Second Edition) "The rich content of ideas sketched or presented in some detail in this book is supplemented by a list of over three hundred references, most of them of 1980 or more recent. The book also contains some relevant typical programs." — Zentralblatt MATH (Review of Second Edition) "I think that the book will be very valuable to students both in numerical analysis and in computer science. I found [it to be] well written and containing much interesting material, most of the time disseminated in specialized papers published in specialized journals difficult to find." — Numerical Algorithms (Review of First Edition)

The Etude

Case Closed

Why are we in such a financial mess today? There are lots of proximate causes: over-leverage, global imbalances, bad financial technology that lead to widespread underestimation of risk. But these are all symptoms. Until we isolate and tackle fundamental causes, we will fail to extirpate the disease. *ECONned* is the first book to examine the unquestioned role of economists as policy-makers, and how they helped create an unmitigated economic disaster. Here, Yves Smith looks at how economists in key policy positions put doctrine before hard evidence, ignoring the deteriorating conditions and rising dangers that eventually led them, and us, off the cliff and into financial meltdown. Intelligently written for the layman, Smith takes us on a terrifying investigation of the financial realm over the last twenty-five years of misrepresentations, naive interpretations of economic conditions, rationalizations of bad outcomes, and rejection of clear signs of growing instability. In *eConned*, author Yves Smith reveals: --why the measures taken by the Obama Administration are mere palliatives and are unlikely to pave the way for a solid recovery --how economists have come to play a profoundly anti-democratic role in policy --how financial models and concepts that were discredited more than thirty years ago are still widely used by banks, regulators, and investors --how management and employees of major financial firms looted them, enriching themselves and leaving the mess to taxpayers --how financial regulation enabled predatory behavior by Wall Street towards investors --how economics has no theory of financial systems, yet economists fearlessly prescribe how to manage them

Creativity is a highly-prized quality in almost any domain of human endeavor, whether one is crafting tangible objects from physical materials, or mental objects from concepts, words, pictures and musical notes. It is a diverse, multi-faceted phenomenon that demands a diverse, multi-disciplinary perspective. By bringing together a wide range of creative producers and consumers, in domains as diverse as cognition, language, music, gesture, image and computation, this volume offers the student of creativity a new and exciting perspective whose many facets form a comprehensive and coherent whole.

Unpopular Culture

Nour loves the luminous glow she was born with, but it's only when it starts to dim that she discovers the true power of her brilliant light. Nour has a superpower: she glows. Her light shines so bright, she feels like a star in the night sky. But when kids at school notice her glow, they're not impressed. If she had a real superpower, they say, she could fly or turn invisible. So Nour stops feeling special. And as her light dims, her world darkens . . . until a nighttime cry from her baby sister shows her how powerful her glow can be. Ian De Haes's heartfelt story and radiant illustrations highlight themes of self-confidence, bravery, empathy, and the imaginative power of a strong female protagonist--whose name means light in Arabic.

Artists working in a variety of western European nations have overturned the dominant traditions of comic book publishing as it has existed since the end of the Second World War, seeking instead to instill the medium with experimental and avant-garde tendencies commonly associated with the visual arts. This book addresses this transformation.

Chronicle of the Horse

Throughout the twentieth century and into the twenty-first, the subject of unidentified flying objects (UFOs) has evoked strong opinions and emotions. For some, the belief in or study of UFOs (known as ufology) has taken on the dimensions of a religious quest. Others remain nonbelievers or at least skeptical of the existence of alien beings and elusive vehicles which never quite seem to manifest themselves. Regardless of one's conviction, nowhere has the debate about UFOs been more spirited than over the events that unfolded near the small New Mexico city of Roswell in the summer of 1947. Numerous witnesses, including former military personnel and respectable members of the local community, have come forward with tales of humanoid beings, alien technologies, and government cover-ups that have caused even the most skeptical observers to pause and take notice. In July 1994, at the request of the Government Accounting Office, the U.S. Air Force completed a thousand-page report to explain the events that transpired in and near Roswell in the summer of 1947. That report sought to bring all the facts to light, declassify all the documents, and present the definitive truth to the public. The Roswell Report: Case Closed is the follow up to that report and contains additional materials and analysis intended to reach a complete, open, and final explanation of the events that occurred in the Southwest many years ago. While this explanation may not be as titillating as tales of unearthly craft and creatures, it is a fascinating story nonetheless.

**** NEW YORK TIMES NUMBER ONE BESTSELLER **** The Gene is the story of one of the most powerful and dangerous ideas in our history from the author of The Emperor of All Maladies. The story begins in an Augustinian abbey in 1856, and takes the reader from Darwin's groundbreaking theory of evolution, to the horrors of Nazi eugenics, to present day and beyond - as we learn to "read" and "write" the human genome that unleashes the potential to change the fates and identities of our children. Majestic in its scope and ambition, The Gene provides us with a definitive account of the epic history of the quest to decipher the master-code that makes and defines humans - and paints a fascinating vision of both humanity's past and future. For fans of Sapiens by Yuval Noah Harari, A Brief History of Time by Stephen Hawking and Being Mortal by Atul Gwande. 'Siddhartha Mukherjee is the perfect person to guide us through the past, present, and future of genome science' Bill Gates 'A thrilling and comprehensive account of what seems certain to be the most radical, controversial and, to borrow from the subtitle, intimate science of our time...Read this book and steel yourself for what comes next' Sunday Times

Ric Hochet - tome 5 - Piège pour Ric Hochet

Under its mandate to interpret Canadian history to the public, Environment Canada - Parks initiated an extensive study of the technology of British ordnance c1710-1860s to aid in the re-creation of period settings at a number of British military sites in Canada, and to provide a manual for the reconstruction of pieces of artillery, their carriages and platforms. The study covers the production of ordnance, the history of the development and design of various pieces (guns, mortars, howitzers, carronades), their carriages and platforms, and the development of gunpowder, cartridges, fuses, and projectiles.

Richard Hochet, le père du célèbre reporter, a été arrêté par la police. Or il était déclaré mort depuis des années. Et son statut d'orphelin avait permis à Ric d'échapper au service militaire. Rattrapé par l'administration, Ric Hochet n'a pas le choix, il doit entrer sous les drapeaux.
