

## Savinder Singh Ecology And Environment

This book, primarily a collection of statements on action agenda to be pursued in geography in India, consists of nineteen chapters exclusively authored by the young geographers. It is organised into five parts: Part I provides “The Contextual Orientation”, Part II contemplates on “Reshaping Geography Education”, Part III explores “Resurrecting Physical Geography”, Part IV looks at “Retrieving Human Geography”, and Part V: “The Summum Bonum” attempts to garland the emerging thoughts. The book seeks to provide a peep into the future Indian Geography and serve professional geographers, researchers, teachers and students alike.

This book covers several dimensions of disaster studies as an emerging discipline. It is the inaugural book in the series ‘Disaster Studies and Management’ and deals with questions such as “Is disaster management a field of practice, a profession, or simply a new area of study?” Exploring intersectionalities, the book also examines areas of research that could help enhance the discourse on disaster management from policy and practice

perspectives, revisiting conventional event-centric approaches, which are the basis for most writings on the subject. Several case studies and comparative analyses reflect a critical reading of research and practice concerning disasters and their management. The book offers valuable insights into various subjects including the challenge of establishing inter- and multi-disciplinary teams within the academia involved in disaster studies, and sociological and anthropological readings of post-disaster memoryscapes. Each of the contributors has an enduring interest in disaster studies, thus enriching the book immensely. This book will be of interest to all the students and scholars of disaster studies and disaster management, as well as to practitioners and policymakers.

The book charts out the history of Geographical Thought from early times to the present day in a single compact volume. Its main focus is on the modern period—beginning with Humboldt and Ritter—more specifically on conceptual developments since the Second World War. NEW TO THE SECOND EDITION The second edition is thoroughly revised and incorporates five new chapters dealing with: ② Nature, Method, Basic Ideas and Conceptual Structure of

Geography ? The Problem of Dualities and How it was Resolved ?  
Nature and Role of Geography as a Social Science—Geographical  
vs. Sociological Imagination ? Time vis-à-vis Space—The Pattern-  
Process Perspective in Geographic Research ? New Directions in  
the Twenty-First Century Human Geography TARGET AUDIENCE •

Environment and Resource Management

Felicitation Volume in Honour of Prof. Enayat Ahmad

Modern Geographical Trends

Pratiyogita Darpan

KEOLADEO- A Geospatial study of a National Park Environs

The over-exploitation of important earth resources such as land and water has led to a number of environment-related problems the world over. At the same time, land-use change caused by various human activities has led to extinction of many plant and animal habitats and species. In this context, the relevance of biodiversity for human survival is becoming a major international political issue as scientific evidence builds on the global health implications of biodiversity loss. These issues are

linked with the issue of climate change, as many of the health risks due to climate change are with rapid degradation of biodiversity. This present work focuses on holistic natural resource-based spatio-temporal planning, development, and management and considers them as essential to save degraded ecosystem for sustainable resource management. Contributions are compiled in two volumes: 1. Climate Change and Biodiversity and 2. Landscape Ecology and Water Management. Geoinformation along with its tools such as remote sensing and geographical information systems (GIS) have been used in assessing the results of various environmental problems both physical and social. The volume is useful for geographers, geoscientists, hydrologists, landscape ecologists, environmentalists, engineers, planners and policy makers.

The whole fabric of a geographical study is based on man-environment relationship. Environmental degradation is intimately associated with the intensifying human impact on his surroundings. Right from the beginning, geographers have not only discussed the various components of an ecosystem and their impact on man but also examined the environmental problems, both global and regional, as well as the question of sustainable development. The present book is an interdisciplinary analysis of the natural and anthropogenic components of the environment. This popular book, which now runs into the third edition, offers a comprehensive and up-to-date geographical information on all the aspects of the environment. For the updated edition several new topics have been added in order to keep the text contemporary. Apart from new additions in almost all the chapters, four new chapters have been incorporated on Biomes, Biodiversity, Climate Change and Towards Sustainability. The book is an essential reading for the students of geography and environmental science. It will also be of value to a broader social audience interested in the application of social knowledge to the understanding of environmental problems at the global and local scale. [Subject: Geography, Environmental Studies]

In this book, Dr. Alok Dubey, an emerging environmental Geomorphologist among the younger and upcoming scintillating Indian Earth Scientists, presents his penetrating study on environmental geomorphology of Trans Yamuna Region revealing various functional relationships among the components and factors of geomorphic environment, like morphodynamic processes and associated morphological features, man as a geomorphic agent and degrading environment of geomorphic features. The Use of computers and sophisticated statistical techniques for the analysis of morphometric data, recent hydrographic information about the rivers Ganga, Yamuna, Tons, etc., application of the sections of minerals and laboratory tests for rock and soil minerals and chemicals for interpretation of geological information; and regular field-surveys and traversing of rivers Ganga and Yamuna through speed-boat for the first-hand knowledge of various geomorphic features, collection of soil and water samples and the study of bank-morphology are the highlights of the work.

**Cities are centres of exciting events, flows, movements and contradictions that produce both opportunities and challenges. Evolved through the centuries, they display layers of spatial, cultural and socio-economic diversity and contestations, which are articulated in multiple ways. It is in this backdrop that the present volume addresses some of the myriad issues visible in the contemporary cities of the Global South. The volume is divided into three parts, each of them focusing on different dimension of contemporary urban challenges. Part I entitled ‘The Concept of a City’ contains five papers dealing with conceptual complexities of the urban. This part analyses as to what extent development intrudes on urban space and space in turn influences development. Part II ‘City and Urban Space’**

**contains six papers. These focus on the existing patterns, processes, and perspectives of urbanization and its consequent everyday manifestations across different cities. Part III 'Urban Policy, Planning and Governance' has six papers dealing with policy and planning. In the wake of rapid urbanization and economic growth, the urban sector is swiftly changing towards being economic engines. Cities and towns being the centres of economic activities play a catalytic role in contributing to economic development and poverty reduction. However, there are layers of challenges that these cities face. This timely volume brings out these challenges and also analyses plausible solutions which can be brought about by the efficient and effective provision of essential urban services and infrastructure. Please note: This title is co-published with Manohar Publishers, New Delhi. Taylor & Francis does not sell or distribute the Hardback in India, Pakistan, Nepal, Bhutan, Bangladesh and Sri Lanka.**

Exploring a topic of vital and ongoing importance, Traditional Forest Knowledge examines the history, current status and trends in the development and application of traditional forest knowledge by local and indigenous communities worldwide. It considers the interplay between traditional beliefs and practices and formal forest science and interrogates the often uneasy relationship between

these different knowledge systems. The contents also highlight efforts to conserve and promote traditional forest management practices that balance the environmental, economic and social objectives of forest management. It places these efforts in the context of recent trends towards the devolution of forest management authority in many parts of the world. The book includes regional chapters covering North America, South America, Africa, Europe, Asia and the Australia-Pacific region. As well as relating the general factors mentioned above to these specific areas, these chapters cover issues of special regional significance, such as the importance of traditional knowledge and practices for food security, economic development and cultural identity. Other chapters examine topics ranging from key policy issues to the significant programs of regional and international organisations, and from research ethics and best practices for scientific study of traditional knowledge to the adaptation of traditional forest knowledge to climate change and globalisation.

""Models in Geography"" aim at presenting the important models and theories in human geography at one place in a concise and cogent manner. These include System Analysis, Malthusian, Marxian and Demographic Transitional Models, Central Place Theory of Christaller and Losch, von Thunen Model of Agricultural Land Use, Weber's Theory of Industrial Location, Rostow's Stages of Growth, Heartland and Rimland Theories, and Laws of International Boundaries and

Frontiers. Besides, the Limits to Growth and Laws of Migration have also been examined. A full chapter has been devoted to types and patterns of rural settlements, primate city, rank-size rule and models of urban land. Documented with the latest data, maps and diagrams, one chapter has been written on climatic change. It is hoped that the book will be of immense help to the students and teachers alike. This will also be useful for those preparing for various competitive examinations."

A historic view on the human ecology of sikkim; the culture and structure of local ecosystems, human ecosystems, various richness of human ecosystems, monasteries and the monastic architecture, customs and their eco-biological significances, spirit possession, shamans and Jhakis, ethno-botany and adaptations. A complete guide to the tourist industry policy makers and scholars.

Keoladeo' A Geospatial Study of a National Park Environs is a book which is usable in different environmental studies and researches, in graduation and post graduation studies at college level. Plenty of knowledge can be grasp being a general and specific reader. One who wants to study about a natural flora and fauna can use this book as a tool.

EDITORS' INTRODUCTION BACKGROUND This is a great academic solace to see the Volume on Buddhist Approach to Responsible Consumption and Sustainable Development which covers Sub-Theme Five of UNDV 2019 Academic Conference. REVIEW OF CONTENTS The World of Today is

suffering from the crisis of consumerism. The first paper on a Buddhist Perspective on Overconsumption and Its Negative Effects towards Society and Environment deals with it specifically in the reference of consumption beyond requirements which is generally termed as overconsumption. Such human tendency leads to negative impact on the entire force of nature and the environment. How the Buddhist principles guide us to live a better life where there is least effect on the environment and society is well explained in this paper. The second paper in this volume, entitled Attaining a Sustainable Society through the Teachings of the Khandhaka of the Theravada Vinaya Pitaka is a vivid example of the benefits which one can derive from our ancient Pali literature. While studying the Theravada Vinaya Pitaka, the author explores the specific words of the Buddha in the Khandhaka which hint at the possibility of sustainability and development going together without harming other societal components. Though the Vinaya being a Pitaka for monastics, it still is highly useful for the laity as well. The paper, Buddhist Ethics in the Establishments of Green Tourism is a unique academic contribution. Here, the writer states that the Buddha's life and principles make us learn a lot as how green methods must be applied in our day-to-day life. The damage being caused by the genre called DEVELOPMENT needs to be controlled and for this, the words of Master exhibits his proximity to protect nature,

humanity and the world order.

***The present book investigates various dimensions of environmental protection and degradation. It contain original and review research articles from science as well as literature fields. Broadly speaking it covers the areas like environmental degradation, issues of pollution, geo-environmental predicament, Eco criticism and environmental consciousness in English literature. The main purpose of the book is to investigate present predicament of environmental degradation and to discuss the possible solutions in a scientific way for the protection of environment. At present the books available on the topic of environmental protection does not cover all the dimensions and most of them are particular path oriented like resources on biodiversity, pollution, etc. the present book fulfils this lacuna and explores environment from various perspectives in a scientific way. The book also discusses reflection of environmental consciousness in literature. Since environmental degradation and protection is a multi-layered phenomenon, this book will be helpful to the teachers, students and researchers who wish to understand various dimensions of the environmental issues***
