*This compact field guide, based on Birds of Seychelles by Adrian Skerrett, Ian Bullock and Tony Disley (Helm 2000), is the only field guide to cover every species recorded in Seychelles. It covers more than 250 species, including all residents, migrants and vagrants. Concise text on facing pages highlights key identification features, including habitat, distribution, status and voice. The plates are based on the authors' previous work, but with the addition on many new images. The text has been completely re-written and revised for this edition, and the plates are been re-worked to accommodate a number of new additions to the country's list. There are now 12 more plates than in the first edition.*

*This book traces the historical background of the Seychelles from their first settlements through independence from Britain in 1976 and into the early 1980s. It focuses on the issues of environment, social and race relations, economic and strategic forces, and domestic and international politics.*

Economic developments since the completion of the first

review under the Policy Coordination Instrument (PCI) in June 2018 have been broadly in line with expectations. The program is largely on track. Staff received renewed assurance from President Faure that the large infrastructure projects announced in his State of the Nation Address (SONA) in March 2018 would be implemented within the fiscal targets under the PCI.

Completion of the fourth review was delayed after the government announced in early 2016 expenditure and revenue initiatives with estimated annual fiscal costs of 3 percent of GDP. After the opposition won a majority in parliament in September, the President announced his resignation and the Vice President took over. With low commodity prices and strong tourist arrivals, the economic developments since the third review have been favorable and economic outlook for 2016-17 remains positive.

On the revenue side of Seychelles, both tax and nontax revenues have shown marked increases during 1998 – 99 on account of a number of factors. A strengthening of tax administration has yielded significant improvements in tax collections, particularly in the areas of taxes on income and profits, which has increased from 4.4 percent of GDP in 1997 to 6.8 percent of GDP in 1999. Trade taxes on domestic goods and services have grown from about 7 percent of GDP in 1997 to about 8

percent of GDP in 1999.

This Technical Assistance (TA) mission focused on scoping the prospects of developing a secondary market for government securities in Seychelles. The Central Bank of Seychelles (CBS) has a leading role in developing the financial markets and thus acted as the primary counterpart for this mission. However, due to the mission being primarily fact-finding it reached out to all various possible stakeholders; the Ministry of Finance Trade Investment and Economic Planning (MoFTIEP), commercial banks, a pension fund, insurance companies, the securities exchange, securities dealers, etc. In addition, the mission sees the need to coordinate with the World bank (WB) and the IMF country (SYC) team as the former is providing assistance within the legal and payment system areas and the latter provides Seychelles with

policy advice under the current PCI program.

First reviewing how invasive species threaten ecosystems, public health, and economies, Gérard Rocamora and Elvina Henriette then explore the importance of invasive species management in ecological restoration on islands and the recovery of threatened species. Highlighting the Seychelles' success in eradicating and controlling invasive vertebrates, the book goes on to provide detailed species accounts of the islands' main invasive plants and animals. Covering forty-four invasive species, the book includes distribution maps, details on ecology and specific threats posed, information on control and eradication attempts in the Seychelles and the region at large, and management recommendations.

A comprehensive history of the Seychelles, this volume traces its periods of colonization by France and Britain, the immobile years of the 20th century, the granting of independence in 1976, and the social changes precipitated by tourism in the late-1990s.

***Seychelles's economy has recovered strongly from the debt crisis and global recession, owing to high foreign direct investment and a rebound in tourism. Inflation remained near zero, and the country continued to rebuild its international reserves and reduce public debt. In 2011, the policy mix under the economic program supported by the Extended Fund Facility has been adjusted in response to global commodity price shocks and financial difficulties of Air Seychelles. Structural reforms will focus on strengthening the financial sector and restructuring of state-owned financial institutions.***

Program implementation and economic fundamentals continue to be strong, but the external position weakened in mid-2014. Projected growth for 2014 has been revised down to 2.8 percent from 3.7 percent, due to weaker demand for Seychelles' two main exports—tourism and canned tuna. At the same time, strong growth in personal earnings and private sector credit have fueled a surge in imports, putting further pressure on the balance of payments. As a result, the exchange rate depreciated an estimated 11 percent in nominal effective terms from early August to late-October.

This paper refers to Seychelles' Request for Purchase Under the Rapid Financing Instrument (RFI). The near-term economic fallout of the coronavirus disease 2019 pandemic is expected to be severe. Restriction in travel will hinder tourism and weaken fiscal and external positions, creating large additional financing needs. The authorities reacted swiftly by taking immediate measures of containment, including border closures,

strengthening health policy responses and supporting households and firms. The emergency IMF support under the RFI provides timely resources to the authorities to address the urgent balance of payments and budgetary needs. The assistance of other international financial institutions and development partners is crucial to close the remaining financing gaps, ease the adjustment burden, and preserve economic growth. The authorities are committed to transparency and good governance in the use of emergency financing by providing monthly reports of pandemic-related expenditure to the National Assembly and undertaking an independent audit of such spending and procurement and publishing the results.

One of the most beautiful places in the world, Seychelles is an island nation off the coast of Africa in the Indian Ocean that received its independence from the United Kingdom in 1976. Abandoned by England and betrayed by France, its founding president lost power in a communist coup spearheaded by the Prime Minister the following year. Following the collapse of communism and its own bankruptcy, Seychelles has been finding an exemplary path to political stability and economic development under the leadership of current president James A. Michel and with the help of the U.A.E. As that founding president, Sir James R. Mancham is in a unique position to tell the story of this transformation, details of the current nation on the move, and thoughts on the way forward to a peaceful and prosperous future.
