Learning disabilities are a heterogeneous group of disorders characterized by failure to acquire, retrieve, or use information competently. They are the most severe and chronic form of learning difficulty in children. They can be present at birth or acquired as a result of illness, exposure to toxins, poor nutrition, medical treatment, sociocultural deprivation, or injury. Learning problems typically consist in failure to acquire reading, writing, or math skills, which are traditionally considered core domains. This book explores the epidemiology, neurobiological bases, and diagnostic tools necessary for a comprehensive assessment of children with learning disabilities. It also presents examples of children with specific learning disabilities and explains possible intervention strategies.

A how-to guide to mastering the skills you need to navigate the murky waters of an academic science career effectively.

The Complete Guide to Best Practice in Teaching, Evaluation and Curriculum Development

Female Pelvic Medicine

*This book contributes to the theory and practice of Philosophy for Children (P4C), with a special emphasis on theoretical and practical issues confronting researchers and practitioners working in contexts that are strongly influenced by Confucian values and norms. It includes writings by prominent P4C scholars from four Confucian societies, viz., Mainland China, Hong Kong, Taiwan, and Japan. These writings showcase the diversity of the P4C model, providing a platform for researchers and practitioners to tell their stories in their own Confucian cultural contexts. The research stories in the first part of the book are concerned with assessing the impact of traditional Confucian norms, promoting critical*

*thinking, reconstructing the notion of community of inquiry, creating moral winds, integrating philosophy into the school curriculum, and localizing teaching methods and materials. Four issues are discussed in the second part of the book: the tension between Confucianism and powerful thinking; cultural challenges for practitioners; the transformation of harmony; and the conception of family. Taken as a whole, the book provides fresh insights into whether and how P4C's Westerninfluenced theories and practices are compromised when they are applied in non-Western, or rather Confucian, contexts. A must-read for anyone interested in the theory and practice of P4C and Confucianism in general.*

*A reappraisal of the tail-rhyme form so strongly associated with medieval English romance, and how it became so appropriated.*

*The Wet Tropics Management Authority and Biotropica Pty Ltd are delighted to present Repairing the Rainforest 2nd Edition, co-authored by Dr Steve Goosem and Nigel Tucker. The updated edition of the book maintains the essence of the hugely popular first edition published in 1995 by providing a practical guide to rainforest re-establishment whilst also delving into the principles behind the practice. Focusing primarily on the Wet Tropics region of Australia, Repairing the Rainforest highlights key ecological principles for restoring rainforest biodiversity and function. These include, among others, the vital role of animal seed-dispersers in rainforests and the traits of plants that help or hinder their dispersal. The book is a must for individuals and organisations involved in land care and rehabilitation of tropical forests. It is an informative hand book that provides valuable insight into the intriguing forests of the Wet Tropics and their successful restoration.*

**This book contributes to broadening the interdisciplinary knowledge basis for the description, analysis and assessment of land use practices. It presents conceptual advances grounded in empirical case studies on four main themes: distal drivers, competing demands on different scales, changing food regimes and land-water competition. Competition over land ownership and use is one of the key contexts in which the effects of global change on social-ecological systems unfold. As such, understanding these rapidly changing dynamics is one of the most pressing challenges of global change research in the 21st century. This book contributes to a deeper understanding of the manifold interactions between land systems, the economics of resource production, distribution and use, as well as the logics of local livelihoods and cultural contexts. It addresses a broad readership in the geosciences, land and environmental sciences, offering them an essential reference guide to land use competition.**

**This book gives a rigorous and practical treatment of integral equations**

**and aims to tackle the solution of integral equations using a blend of abstract structural results and more direct, down-to-earth mathematics. The interplay between these two approaches is a central feature of the text, and it allows a thorough account to be given of many of the types of integral equation that arise, particularly in numerical analysis and fluid mechanics. Because it is not always possible to find explicit solutions to the problems posed, much attention is devoted to obtaining qualitative information and approximations and the associated error estimates. The Climate Change 2007 volumes of the Fourth Assessment Report of the Intergovernmental Panel on Climate Change (IPCC) provide the most comprehensive and balanced assessment of climate change available. This IPCC Working Group II volume provides a completely up-to-date scientific assessment of the impacts of climate change, the vulnerability of natural and human environments, and the potential for response through adaptation. Written by the world's leading experts, the IPCC volumes will again prove to be invaluable for researchers, students, and policymakers, and will form the standard reference works for policy decisions for government and industry worldwide.**

Expounds a new concept of human security- one that focuses on the security of people in their homes, in their jobs, in their communities and in their environment.

This book is designed as a guide for management of advanced clinical scenarios encountered by the contemporary pelvic floor surgeon. It is organized by pelvic floor disorder (PFD) and covers the evaluation and treatment of urinary incontinence, fecal incontinence, and pelvic organ prolapse. Opening chapters in each section cover the fundamentals of proper and comprehensive assessment of patient PFDs, as well as the treatment options that are available for each disorder. The book then focuses on more complex and challenging situations that are becoming more frequently encountered as the number of patients being treated for PFD increases and the length of patient follow-up grows. Each chapter finally includes an expert commentary to address these new scenarios and offers a shifted approach from that required for treatment-naive patients. *Female Pelvic Medicine: Challenging Cases with Expert Commentary* teaches the reader how to approach the most difficult of clinical situations in a multidisciplinary fashion. .

Explains best-practices based on a number of successful international case studies.

Vitamin K and Vitamin K-Dependent Proteins in Relation to Human Health

Singapore in the World; the World in Singapore

The Political Economy of Singapore's Industrialization

**xxxThis updated third edition is a detailed reference for nurses and other health care providers who care for children with neurosurgical conditions. The explanations of pathophysiology, anatomy, neurodiagnostic imaging, and treatment options for each neurosurgical diagnosis will help to clarify the rationale behind the nursing care. Descriptions of presenting symptoms, history and findings on neurological examination will help nurses understand the neurological disorder and identify problems. New chapters have been added on skull and scalp anomalies, pediatric concussion, abuse head trauma and on neuroimaging. Each chapter includes case studies, impact on families, patient and family education, and practice pearls. Staff and student nurses working in clinics, critical care units, pediatric units, operating rooms, post-anesthesia care units, emergency departments, and radiology departments will benefit from the information presented. Although this book is written for nurses, child life therapists, physical and occupational therapists, medical students and**

**neurosurgery residents will also find it helpful. Parents of children with neurosurgical disorders will also find it a useful resource in understanding their child's condition. Cathy C. Cartwright and Donna C. Wallace have been awarded third place in the 2017 American Journal of Nursing Book of the Year Awards in CHILD HEALTH category.**

**In 1900, for every 1,000 babies born in the United States, 100 would die before their first birthday, often due to infectious diseases. Today, vaccines exist for many viral and bacterial diseases. The National Childhood Vaccine Injury Act, passed in 1986, was intended to bolster vaccine research and development through the federal coordination of vaccine initiatives and to provide relief to vaccine manufacturers facing financial burdens. The legislation also intended to address concerns about the safety of vaccines by instituting a compensation program, setting up a passive surveillance system for vaccine adverse events, and by providing information to consumers. A key component of the legislation required the U.S. Department of Health and Human Services to collaborate with the Institute of Medicine to assess concerns about the safety of vaccines and potential adverse events, especially in children. Adverse Effects of Vaccines reviews the epidemiological, clinical, and biological evidence regarding adverse**

health events associated with specific vaccines covered by the National Vaccine Injury Compensation Program (VICP), including the varicella zoster vaccine, influenza vaccines, the hepatitis B vaccine, and the human papillomavirus vaccine, among others. For each possible adverse event, the report reviews peer-reviewed primary studies, summarizes their findings, and evaluates the epidemiological, clinical, and biological evidence. It finds that while no vaccine is 100 percent safe, very few adverse events are shown to be caused by vaccines. In addition, the evidence shows that vaccines do not cause several conditions. For example, the MMR vaccine is not associated with autism or childhood diabetes. Also, the DTaP vaccine is not associated with diabetes and the influenza vaccine given as a shot does not exacerbate asthma. Adverse Effects of Vaccines will be of special interest to the National Vaccine Program Office, the VICP, the Centers for Disease Control and Prevention, vaccine safety researchers and manufacturers, parents, caregivers, and health professionals in the private and public sectors. The report offers a simple framework for policy analysis by identifying three forest types: frontiers and disputed lands; lands beyond the agricultural frontier; and, mosaic lands where forests and agriculture

**coexist. It collates geographic and economic information for each type that will help formulate poverty-reducing forest policy.**

PANDEMIC ETHICS is a clear and provocative introduction to the ethics of COVID-19 from a leading contemporary moral philosopher. It is suitable for university-level students, academics, and policymakers, as well as the general reader. It is also an original contribution to the emerging literature on this important topic. The author has made it available open access, so that it can be downloaded and read for free by all those who are interested in these issues. People facing a new diagnosis of cancer are unsettled by their prognosis and treatment options, and they often seek to integrate complementary modalities into their conventional care plan, hoping to improve their chances of cure and decrease side effects. Many do so without informing their oncologist, for fear of

alienating them or not convinced that their physician would be informed about complementary therapies. Integrative Oncology, the first volume in the Weil Integrative Medicine Library, provides a wealth of information for both practitioners and consumers on the emerging field of integrative oncology. Noted oncologist Donald Abrams and integrative medicine pioneer Andrew Weil and their international panel of experts present up-to-date and extensively referenced chapters on a wide spectrum of issues and challenges, bound in one comprehensive, reader-friendly text in a format featuring key points, sidebars, tables, and a two-color design for ease of use. It is destined to emerge as the definitive resource in this emerging field.

Singapore's successful public housing programme is a source of political legitimacy for the ruling People's Action Party. Beng-Huat Chua accounts for the success of public housing in Singapore and draws out lessons for other nations. Housing in Singapore, he explains in this incisive analysis, is seen neither as a consumer good (as in the US) nor as a social right (as in the social democracies of Europe). The author goes on to look at the ways in which Singapore's planners have dealt with the problems of creating communities in a modern urban environment. He concludes that the success of the public housing programme has done much for Singapore.

*There is a considerable gap between the science of conservation biology and the design and execution of biodiversity conservation projects in the field.*

*Science is often failing to inform the practice of conservation, which remains largely experience-based. The main reason is the poor accessibility of evidence on the effectiveness of different interventions. This is the basis for this book adopting an 'evidence-based approach', modelled on the systematic reviews used in health sciences and now being applied to many policy arenas. Evidence-based Conservation brings together a series of case studies, written by field practitioners, that provides the evidence-base for evaluating how effective*

*conservation and poverty alleviation strategies can be better implemented. A series of systematic reviews uses experiences and data from fifteen integrated conservation and development projects conducted in the Lower Mekong region, specifically in Vietnam, Laos and Cambodia. They provide wide-ranging overviews of the effectiveness of protected areas and how innovative tools and methods for monitoring and evaluation can be utilised for more effective outcomes. Results are in the form of management and policy recommendations, based on the quality of evidence and the cost-utility of the intervention. By bridging the gap between field practice and conservation, the analysis should lead to more effective integrated conservation and development interventions. The book represents one of the first attempts to apply the evidence-based approach to conservation and development.*

"The diverse cultures of Brunei Darussalam, Cambodia, Indonesia, Lao PDR, Malaysia, Myanmar, Philippines, Singapore, Thailand and Vietnam, the ten countries of the ASEAN region, evolved basic artistic forms and expressions that closely interface with their history, society and religion. This publication is the result of discussions and exchanges among representative scholars of the ASEAN countries on presenting Southeast Asian art and culture from a

contextual Asian perspective. It shows art and culture across Southeast Asia drawing from similar and yet locally distinct mythical and religious beliefs, cultural traditions, cycles of migrations, trade and political change."--BOOK JACKET.

This book provides a comprehensive and up-to-date review of all aspects of childhood Acute Lymphoblastic Leukemia, from basic biology to supportive care. It offers new insights into the genetic pre-disposition to the condition and discusses how response to early therapy and its basic biology are utilized to develop new prognostic stratification systems and target therapy. Readers will learn about current treatment and outcomes, such as immunotherapy and targeted therapy approaches. Supportive care and management of the condition in resource poor countries are also discussed in detail. This is an indispensable guide for research and laboratory scientists, pediatric hematologists as well as specialist nurses involved in the care of childhood leukemia.

Studies in Language and Social Interaction

### New Directions for Health Services Delivery

A critical examination of ethnicity in post-independence Singapore, the social policies that have been evolved to manage it and the implications of the Singapore experiment for other plural societies in Asia and elsewhere.

This collection offers empirical studies and theoretical essays about human communication in everyday life. The writings come from many of the world's leading researchers and cut across academic boundaries, engaging scholars and teachers from such disciplines as communication, sociology, anthropology, linguistics, and education. Chapters emphasize empirical, qualitative studies of people's everyday uses of talk-in-interaction, and they feature work in such areas as sociolinguistics, conversation analysis, discourse analysis, and ethnography. The volume is dedicated to and highlights themes in the work of the late Robert Hopper, an outstanding scholar in communication who pioneered research in Language and Social Interaction (LSI). The contributors examine various features of human interaction (such as laughter, vocal repetition, and hand gestures) occurring naturally within a variety of settings (at a dinner table, a doctor's office, an automotive repair shop, and so forth), whereby interlocutors accomplish aspects of their interpersonal or institutional lives (resolve a disagreement, report bad medical news, negotiate a raise, and more), all of which may relate to larger social issues (including police brutality, human spirituality, death, and optimism). The chapters in this anthology show that social life is largely a communicative accomplishment and that people constitute the social realities experienced every day through small and subtle ways of communicating, carefully orchestrated but commonly taken for granted. In showcasing the diversity of contemporary LSI research, this volume is appropriate for scholars and graduate students in language and social interaction, communication, sociology, research methods, qualitative research methods, discourse analysis, conversation analysis, linguistics, and related areas.
