A new, thoroughly updated edition of a comprehensive overview of knowledge management (KM), covering theoretical foundations, the KM process, tools, and professions. The ability to manage knowledge has become increasingly important in today's knowledge economy. Knowledge is considered a valuable commodity, embedded in products and in the tacit knowledge of highly mobile individual employees. Knowledge management (KM) represents a deliberate and systematic approach to cultivating and sharing an organization's knowledge base. This textbook and professional reference offers a comprehensive overview of the field. Drawing on ideas, tools, and techniques from such disciplines as sociology, cognitive science, organizational behavior, and information science, it describes KM theory and practice at the individual, community, and organizational levels. Chapters cover such topics as tacit and explicit knowledge, theoretical modeling of KM, the KM cycle from knowledge capture to knowledge use, KM tools, KM assessment, and KM professionals. This third edition has been completely revised and updated to reflect advances in the dynamic and emerging field of KM. The specific changes include extended treatment of tacit knowledge; integration of such newer technologies as social media, visualization, mobile technologies, and crowdsourcing; a new chapter on knowledge continuity, with key criteria for identifying knowledge at risk; material on how to identify, document, validate, share, and implement lessons learned and best practices; the addition of new categories of KM jobs; and a new emphasis on the role of KM in innovation. Supplementary materials for instructors are available online.

A Comprehensive Guide to Principles, Techniques and Software Tools

Ce cahier propose un ensemble d'activités structurées couvrant l'intégralité du programme de technologie de sixième. Il est conçu autour de trois objets référents et du manuel Eureka Technologie 6e. Le cahier d'activités : Onze séquences pédagogiques indépendantes couvrent les cinq approches du programme et sont construites selon une démarche d'investigation ou de résolution de problème. Chacune est élaborée à partir

d'une situation-problème déterminée (Notre problème en classe) qui concerne un ou plusieurs objets référents. Les activités, menées individuellement, en binôme ou en équipe, apportent des éléments de réponses au questionnement. Elles impliquent : des manipulations sur les objets et leurs représentations volumiques ; des recherches dans le manuel ou sur documents informatiques ; des productions sur les fiches

d'activités ou sur ordinateur. Une synthèse des activités est élaborée par une mise en commun des travaux (Les réponses à notre problème). Chaque séquence donne lieu à une structuration des connaissances (Mon bilan), en relation avec les pages " Bilan " du manuel. Ce cahier comporte de nombreuses activités sur ordinateur permettant aux élèves d'acquérir les compétences des Technologies de l'Information et de la Communication définies dans le programme. La structuration des connaissances TIC est réalisée à partir de trois doubles pages spécifiques. Les trois objets référents : Les trois objets référents sont un vélo, une trottinette et un modèle réduit de voiture radiocommandée. Les deux premiers sont sans spécificité technique particulière et peuvent être achetés auprès de nombreux revendeurs. La voiture radiocommandée est commercialisée par Pierron Education (référence MT24500) accompagnée d'un dossier pédagogique complet.

This book constitutes the refereed proceedings of the 12th Australian Joint Conference on Artificial Intelligence, AI'99, held in Sydney, Australia in December 1999. The 39 revised full papers presented together with 15 posters were carefully reviewed and selected from more than 120 submissions. The book is divided in topical sections on machine learning, neural nets, knowledge representation, natural language

processing, belief revision, adaptive algorithms, automated reasoning, neural learning, heuristics, and applications

Electrical Circuit Theory and Technology is a fully comprehensive text for courses in electrical and electronic principles, circuit theory and electrical technology. The coverage takes students from the fundamentals of the subject, to the completion of a first year degree level course. Thus, this book is ideal for students studying engineering for the first time, and is also suitable for pre-degree vocational courses, especially where progression to higher levels of study is likely. John Bird's approach, based on 700 worked examples supported by over 1000 problems (including answers), is ideal for students of a wide range of abilities, and can be worked through at the student's own pace. Theory is kept to a minimum, placing a firm emphasis on problem-solving skills, and making this a thoroughly practical introduction to these core subjects in the electrical and electronic engineering curriculum. This revised edition includes new material on transients and applications of transients, with the content carefully matched to typical undergraduate modules. Free Tutor Support Material including full worked solutions to the assessment papers featured in the book will be available at <http://textbooks.sievier.com/>. Material is only available to lecturers who have adapted the text as an essential purchase. In order to obtain your password to access the material please follow the guidelines in the book.

The executive forum consists of 20 national teams who reviewed the implications for national export strategies of the new electronic age. Each team analysed the implication of e-trade for international competitiveness to determine the most suitable national response. The intention was to identify best practice for developing and transition economies. The debate was supported by a series of research papers. The chapter headings of this report are: statement from the market; the national response; creating the right environment - overcoming the digital divide; promoting e-trade competency in the existing environment; implications for trade support institutions.

Conformément au programme de sixième, cet ouvrage accompagne, par sa structure et le traitement des chapitres, la mise en oeuvre des apprentissages selon des démarches d'investigation et de résolution de problème menées en classe sur différents objets techniques. Il met en valeur de façon claire et précise les connaissances et les capacités du programme en relation avec le socle commun de connaissances et de compétences. Des documents de qualité permettent à l'élève de questionner la réalité de son environnement technologique en relation avec le domaine d'application de ce niveau : les moyens de transport. Le cédérom joint varie les supports d'étude (vidéos, animations, diaporamas), renouvelle l'intérêt des élèves (QCM, exercices interactifs) et met réellement en application les TIC et le B2i. De nombreux repères permettent aux élèves de suivre leurs apprentissages et d'évaluer leurs progrès, aussi bien sur les compétences disciplinaires que sur celles du socle commun.
