In this groundbreaking book Kent E. Calder argues that a new transnational configuration is emerging in Asia, driven by economic growth, rising energy demand, and the erosion of longstanding geopolitical divisions. What Calder calls the New Silk Road—with a strengthening multi-faceted relationship between East Asia and the Middle East at its core—could eventually emerge as one of the world's most important multilateral configurations. Straddling the border between comparative politics and international relations theory, this important book will stimulate debate and discussion in both fields.

Within a year of President George W. Bush announcing the end of major combat operations in Iraq in May 2003, dozens of attacks by insurgents had claimed hundreds of civilian and military lives. Through 2004 and 2005, accounts from returning veterans presaged an unfolding strategic debacle—potentially made worse by U.S. tactics being focused on extending conventionally oriented military operations rather than on adapting to the insurgency. By 2007, however, a sea change had taken place, and some U.S. units were integrating counterinsurgency tactics and full-spectrum operations to great effect. In the main, the government and the media cited three factors for having turned the tide on the

battlefield: the promulgation of a new joint counterinsurgency doctrine, the "surge" in troop numbers, and the appointment of General David Petraeus as senior military commander. James Russell, however, contends that local security had already improved greatly in Anbar and Ninewah between 2005 and 2007 thanks to the innovative actions of brigade and company commanders—evidenced most notably in the turning of tribal leaders against Al Qaeda. In *Innovation, Transformation, and War*, he goes behind the headlines to reveal—through extensive field research and face-to-face interviews with military and civilian personnel of all ranks—how a group of Army and Marine Corps units successfully innovated in an unprecedented way: from the bottom up as well as from the top down. In the process they transformed themselves from organizations structured and trained for conventional military operations into ones with a unique array of capabilities for a full spectrum of combat operations. As well as telling an inspiring story, this book will be an invaluable reference for anyone tasked with driving innovation in any kind of complex organization.

While the glories and tragedies of the space shuttle make headlines and move the nation, the story of the shuttle forms an inseparable part of a lesser-known but no less important drama—the search for a reusable single-stage-to-orbit rocket. Here an award-winning student of space science, Andrew J. Butrica, examines the long and tangled history of this ambitious concept, from its first glimmerings

in the 1920s, when technicians dismissed it as unfeasible, to its highly expensive heyday in the midst of the Cold War, when conservative-backed government programs struggled to produce an operational flight vehicle. Butrica finds a blending of far-sighted engineering and heavy-handed politics. To the first and oldest idea—that of the reusable rocket-powered single-stage-to-orbit vehicle—planners who belonged to what President Eisenhower referred to as the military-industrial complex added experimental ("X"), "aircraft-like" capabilities and, eventually, a "faster, cheaper, smaller" managerial approach. Single Stage to Orbit traces the interplay of technology, corporate interest, and politics, a combination that well served the conservative space agenda and ultimately triumphed—not in the realization of inexpensive, reliable space transport—but in a vision of space militarization and commercialization that would appear settled United States policy in the early twenty-first century. -- D. M. Ashford

Sharing Orion is a highly unique book, in that it is an Action/Adventure/Romance novel written by a fighter pilot. The main characters, Aiden and Chloe Eason, take the reader on a wild ride unlike any other ever experienced. Set in a fighter squadron, the reader experiences true fighter squadron dynamics and flying excitement not Hollywood embellishments.

*Knox turns the tables France's rhetoric of 'internal otherness', asking her reader not to spot those deemed France's others but rather to deconstruct the very gazes that produce them. Weaving together a vast corpus of colonial French children's comics, Francophone novels, and African popular music, fashion, and dance, Knox traces how the ways colonial 'human zoos' invited their French spectators to gaze on their colonized others still inform the frameworks through which racial and ethnic minorities are made-and make themselves-visible in contemporary France. In addition to analyzing how literature and music depicting immigrants and their descendants in France make race and ethnicity visible, Knox also illustrates how the works she analyzes self-reflexively ask whether they, as commodities sold within wider cultural marketplaces, perpetuate the culture of exoticism they seek to contest. Finally, Knox contends that to take seriously the way the texts interrogate the relationship between power, privilege, and the gaze also requires reconsidering the visions of normalcy from which racial and ethnic minorities supposedly depart. She thus concludes by exposing a critical 'blind spot' in French cultural studies-whiteness-before subjecting it to the same scrutiny France's 'visible minorities' face.*

*The appearance of the crossbow on the European battle field in A.D. 1100 as the weapon of choice for shooting down knights threatened the status quo of medieval chivalric fighting techniques. By 1139 the Church had intervened, outlawing the use of the crossbow among Christians. With this edict, arms control was born. As Robert L. O'Connell reveals in this vividly written history of weapons in Western culture, that first attempt at an arms control measure characterizes the complex and often paradoxical relationship between men and arms throughout the centuries. In a sweeping narrative that ranges from prehistoric times to the nuclear age, O'Connell demonstrates how social and economic conditions determine the types of weapons and the tactics used in warfare and how, in turn, innovations in weapons technology often undercut social values. He describes, for instance, how the invention of the gun required a redefinition of courage from aggressive ferocity to calmness under fire; and how the machine gun in World War I so overthrew traditional notions of combat that Lord Kitchener exclaimed, "This isn't war!" The technology unleashed during the Great War radically altered our perceptions of ourselves, as these new weapons made human qualities almost irrelevant in combat. With the invention of the atomic bomb, humanity itself became subservient to the weapons it had produced. Of Arms and Men brilliantly integrates the evolution of politics, weapons, strategy, and tactics into a coherent narrative, one spiced with striking portraits of men in*

What is the relationship between what has happened in the two countries? And where did Japan's technological excellence come from? In an economic history that will arouse controversy on both sides of the Pacific, Richard J. Samuels finds a key to Japan's success in an ideology of technological development that advances national interests. From 1868 until 1945, the Japanese economy was fired by the development of technology to enhance national security; the rallying cry "Rich Nation, Strong Army" accompanied the expanded military spending and aggressive foreign policy that led to the disasters of the War in the Pacific. Postwar economic planners reversed the assumptions that had driven Japan's industrialization, Samuels shows, promoting instead the development of commercial technology and infrastructure. By valuing process improvements as much as product innovation, the modern Japanese system has built up the national capacity to innovate while ensuring that technological advances have been diffused broadly through industries such as aerospace that have both civilian and military applications. Struggling with the uncertainties of a post-Cold War economy, the United States has important lessons to learn from the way Japan has subordinated defense production yet emerged as one of the most technologically sophisticated nations in the world. The Japanese, like the Venetians and the Dutch before them, show us that butter is just as likely as guns to make a nation strong, but that nations cannot hope to be strong without an ideology of technological development that nourishes the entire national economy.*

*THE SPIRIT OF A FIGHTER is a story about a person who was born in one of the poorest countries in the world, Cambodia. In fact, since the very first day of his life, he was not only condemned to be a kid living with a poor family in a poor country, but a kid who was victim of the cold war of the World Powers, the civil war and the genocide perpetrated by his own people, the Khmers Rouges in their famous Killing Fields. In this respect, in 1978 when he was only 20 years old, he was the sole survivor of his loving family of seven. But he, himself escaped from Cambodia and went to France in 1981 with his wife and 6 month-old baby boy. He became citizen of his new adopted Mother Land and started working there, first as a gardener, then as an engineer, and in 2004 he immigrated to the United States of America. How often is it that we are fortunate enough to sit down and listen to first-person accounts of a distant past - not from a history book or a television documentary, but from a human being, who lived it, experienced it and is willing to share it. Jesse Pettey is one of these people who as a young man joined the military after the attack on Pearl Harbor because he felt it was his duty. He learned to fly a PT-19 and moved on to a BT-13. During World War Two, Pettey piloted a B-24 'Liberator' and flew his first combat mission in August of 1944, to be followed by 34 more. *One More Mission* is not only an account of World War Two aerial combat missions with the 15th Air Force in Italy, but of a young man's journey through a gauntlet of emotion, growth and trying experiences. Mr. Pettey's glimpses into his past are a heartwarming journey to a different era, a different pace and a different lifestyle. His talent carries the reader along through his upbringing in East Texas through the precarious days of flight training and then on to the dangerous excitement of deadly combat over the skies of Europe. And all the while, you feel as if he's sitting across a table from you with a cup of coffee in hand, sharing the times of his life with a close friend. His story is well written yet personal, inspiring and yet humble. It is a story that demands sharing. *One More Mission* is a journey not

This book presents a general nonlinear control design methodology for nonlinear uncertain dynamical systems. Specifically, a hierarchical nonlinear switching control framework is developed that provides a rigorous alternative to gain scheduling control for general nonlinear uncertain systems. The proposed switching control design framework accounts for actuator saturation constraints as well as system modeling uncertainty. The efficacy of the control design approach is extensively demonstrated on aeroengine propulsion systems. In

particular, dynamic models for rotating stall and surge in axial and centrifugal flow compression systems that lend themselves to the application of nonlinear control design are developed and the hierarchical switching control framework is then applied to control the aerodynamic instabilities of rotating stall and surge. For the researcher who is entering the field of hierarchical switching robust control this book provides a plethora of new research directions. Alternatively, for researchers already active in the field of hierarchical control and hybrid systems, this book can be used as a reference to a significant body of recent work. Furthermore, control practitioners involved with nonlinear control design can immensely benefit from the novel nonlinear stabilization techniques presented in the book.
