A simple and comfortable wooden house is what you need in order to have a feeling of serenity and privacy. If you want to bond with your spouse, children or friends, there is no better way to do it than spend sometime with them around a simple wooden house in a secluded environment. On top of bonding with family and friends, a wooden house provides the perfect resting place after a successful hunting trip. Wooden houses can be built anywhere on earth regardless of the natural phenomena experienced there. For instance, you can build the house in areas prone to earthquakes and rest assured that nobody will be severely injured or die in case of an earthquake. Even if the house is brought to the ground by an earthquake, there is minimal probability of anybody being injured with wooden walls and roof. Repairing wooden houses is also quite cheap when compared to repair of houses built with concrete, blocks, bricks or any other construction material. This means that you'll end up saving money by simply deciding to build a wooden house. It is also quite easy to alter the design of a wooden house than houses built using other materials. If you want special features in a home, all you need to do is make sure that you own a wooden house and then install all the features you want. With the book "How to Build a Simple Wooden House," you'll have everything required to construct a wooden house anywhere in the world. The book contains step by step guidelines on how you can build such a house from scratch. Start your journey to owning your dream home by reading the book: How to Build a Simple Wooden House!!!

Introduction to Tiny Houses The Tiny House Movement The tiny house movement is gaining momentum and popularity for its cost effectiveness and simplicity. People who support this movement are happy to live in a downsized home -- their tiny house is a lifestyle that they adopt/adapt and are happy in doing so. While one might argue the disadvantages of living in a tiny space, the financial freedom that it brings along cannot be disregarded. The average size of a house in the United States of America was 1,500 square feet in the 1950's; now, when the family sizes are shrinking, the average house size is 2,400 square feet. The lavish spaces in a 2,400 square foot house lies dormant for most part of the year. One such classic example is the living room, which serves its purpose for a couple of hours during the Christmas season... rest of the time its existence is hardly noticed or acknowledged; ditto for the multiple bathrooms, the huge dining room, bedrooms, and garage parking. The cost one pays for a huge home that is hardly used is hefty -- a mortgage that stretches almost until the end of one's retirement. Add to this the maintenance cost and the carbon footprint of a huge house!
