Web Technologies: A Computer Science Perspective is ideal for courses in Web-based Systems (aka Web/Internet Programming/Systems) in Computer Science, MIS, and IT departments. This text introduces the key technologies that have been developed as part of the birth and maturation of the World Wide Web. It provides a consistent, in-depth treatment of technologies that are unlikely to receive detailed coverage in non-Web computer science courses. Students will find an ongoing case study that integrates a

wide spectrum of Web technologies, guidance on setting up their own software environments, and a variety of exercises and project assignments.

Count Hamnet Thyszen is a minor noble of the drowsy old Ratumsdalian Empire. Its capital city, Nidaros, began as a mammoth hunters' camp at the edge of the great Glacier. But that was centuries ago, and as everyone knows, it's the nature of the great Glacier to withdraw a few feet every year. Today Nidaros is an old and many-spired city; and though they still feel the breath of the great Glacier in every winter's winds, the ice cap itself has retreated beyond the horizon. Trasmamund, a clan chief of the mammoth-herding Bizogots, the next tribe north, has come to town with strange news. A narrow gap has opened in what they'd always thought was an endless and impregnable wall of ice. The great Glacier does not go on forever - and on its other side are new lands, new animals, and possibly new people. Ancient legend says that on the other side is the Golden Shrine, put there by the gods to guard the people of their world. Now, perhaps, the road to the legendary Golden Shrine is open. Who could resist the urge to go see? Not Hamnet Thyszen or Trasmamund. Not Ulric Skakki, Hamnet's old comrade in arms: a good man to have at your side, although perhaps not at your back. And not, damnably, Eyvind Torfinn - a scholar, a very knowledgeable man but, alas, the husband of Hamnet's former wife, Gudrid: a troublemaker if there ever was one. She's decided to come along, too. For every one of them, the Glacier has always been the boundary of the world. Now they'll be traveling beyond it into a world that's bigger than anyone knew. Adventures will surely be had...

The integument plays an important role in the survival of meta zoans by separating and protecting them from a hostile environ ment. Its function ranges from protection against injury and in fecton, participation in the regulation of body temperature and water balance, to respiratory activity, monitoring of the environ ment and production of signals related to behaviour. All these result from specific structural, biochemical and physiological properties of intra- and extracellular components of the integu ment. Thus its characterization can be best accomplished by a multidisciplinary approach with authors specialized in different fields of science. This multi-author book, in two volumes, provides an up-to-date survey of the literature. The first volume deals with the integument of invertebrates, the second with that of vertebrates, both organized primarily on a phylum basis. As the level of knowledge on the integument of phyla differs considerably, the information provided is correspondingly either limited or con densed. For some of the smaller groups of invertebrates little information is available, as often only a few electron micrographs are to be found in the literature ; on the other hand, from the large body of knowledge existing for vertebrates, particularly for mammals, no complete overview can be provided, but publica tions giving access to further information have been reviewed critically.

In many parts of the world, knowledge is being put to work to accelerate and deepen the development process, promoting innovation and helping to generate wealth and jobs. This book discusses advanced development strategies that take into account education, information and communication technology, infrastructure, innovation, and the prerequisite economic and institutional regimes.

Presents an overview of principal characteristics of the modern evolutionary approach to economics and offers insight into the ideas of some of its important representatives and fields of application. Begins with a concise history of evolutionary economics, then discusses its relationship with neoclassical economics, arguing that the two approaches are complementary. Discusses the firm from an evolutionary and neoclassical standpoint, then looks at modern model building in relation to Schumpeter's work and to technological change. Sharad Pawar is one of India's key public figures. Through his five- decade-long career, during which he has never lost an election, he has served as chief minister of Maharashtra four times and as India's defence minister and minister for agriculture. On two occasions he came close to becoming the country's prime minister. He has often bucked the trend, preferring policy and pragmatism over populism, and won admiration for his administrative acumen and consensual politics. Eyewitness-at the highest levels-to India's and Maharashtra's history since the 1960s, he shares in this memoir his reflections on coalition politics, the loss of democracy in the Congress Party (with which he

began his political life), the state of agriculture and industry in the country, and the absolute necessity of social harmony and a liberal, inclusive ethos for India's future. As he does this, he also gives us rare information about many crises and turning points: Emergency and its impact on national and regional politics; the fall of the Chandrashekhar government in 1991; the signing of the Punjab Accord between Rajiv Gandhi and H.S. Longowal; the Babri Masjid demolition; the Mumbai bomb blasts of 1993; the devastating earthquake in Latur; the controversy over the Enron power project; and Sonia Gandhi's dramatic decision to give up the chance to occupy the country's highest office. Throughout, the narrative also contains candid and fascinating assessments of some of the biggest names in Indian politics, among them, Indira, Rajiv and Sonia Gandhi, Y.B. Chavan, Morarji Desai, Biju Patnaik, Atal Bihari Vajpayee, Chandrashekhar, P.V. Narasimha Rao, George Fernandes and Bal Thackeray. 'On My Terms' is a rich, insightful and remarkably frank memoir by one of India's most experienced and influential political leaders, and a valuable document of the country's recent political history.

The basic questions of Who Am I? Where Am I Going? What Is the Purpose of Life? are asked by every generation, and Patanjali's answers (given in the third century BC) form one of the oldest spiritual texts in the world. 'That which unites' is called 'Yoga' - and is thus much broader than the form of exercise so popular today. It is a way to restore our lost wholeness, our integrity as complete human beings, by unifying the personality around a centre that is silent and unbounded. Alistair Shearer's superb introduction and translation bring these ancient, vital teachings to life in the modern world and are for all those who seek the benefits of self-knowledge.
