He then goes on to clarify the implications of this account for the specifically Christian doctrines of the Trinity (that God is 'three persons in one substance') and of the Incarnation (that God became incarnate in Jesus Christ).

Swinburne finds that there are good reasons to believe the Christian additions to the core Western idea of God.

This two-volume Journey of a Rabbi consists of essays describing ventures undertaken, events experienced, and ideas articulated that reflect the life work of a rabbi and Jewish educator. What threads its way throughout these writings is a persistent search for ways and means to revitalize Jewish life in our time. Written in lucid and compelling fashion, the story portrays early family influences and mentoring of a searching youth, experiences

of a rabbinical student, army chaplain, and pulpit rabbi that brought into focus the tasks ahead. The story proceeds to detail the work as a denominational executive, which broadened concern for the larger community and return to pulpit work devoted to fashioning a "Synagogue-Center." It then segues into depiction of the comprehensive initiatives in education, the arts and community outreach as Dean at the University of Judaism. Interspersed throughout are "thought" essays about religious phenomena, faith, the personal life, the land of Israel,

Animal products are vital components of the diets and

livelihoods of people across sub-Saharan Africa. They are frequently traded in local, unregulated markets and this can pose significant health risks. This volume presents an accessible overview of these issues in the context of food safety, zoonoses and public health, while at the same time maintaining fair and equitable livelihoods for poorer people across the continent. The book includes a review of the key issues and 25 case studies of the meat, milk, egg and fish food sectors drawn from a wide range of countries in East, West and Southern Africa, as part of the "Safe Food, Fair Food" project. It describes a realistic analysis of food safety risk by developing a methodology of 'participatory food safety risk assessment', involving

small-scale producers and consumers in the process of data collection in a data-poor environment often found in developing countries. This approach aims to ensure market access for poor producers, while adopting a realistic and pragmatic strategy for reducing the risk of food-borne diseases for consumers.

Polystyrene represents one of the oldest and the most widespread polymers in the world. Its starts as far back as 1839 when a German apothecary Edmon Simon distilled an oily liquid named styrol from the resin of Turkish sweet gum trees. In several days, the sterol converted into a jelly product that he thought resulted from the oxidation process. For that reason, the jelly

product received the name styroloxide. This book discusses the synthesis of polystyrene, as well as the characteristics and applications of this polymer. "It's easy to imagine ways the future can be ugly and depressing. It's harder, but more worthwhile, to imagine plausible ways we can make it better," says Stanley Schmidt, and he should know. As the editor of Analog (and a science-fiction writer himself), he's thought about the future more than most. Since the golden age of John W. Campbell (editor from 1938-72), Analog magazine has been renowned for editorials that provoke, prod, inspire, anger, and ignite the magazine's readers into thinking, questioning their own assumptions, and looking at the

He has succeeded in exemplary fashion, which helps to explain why he's a twenty-two-time nominee for the best editor Hugo Award. Now, for the first time, thirty-five of his stimulating essays have been gathered in book form. In "King of the Hill (No Matter What)" he considers the questions of animal and machine intelligence. "The Fermi Plague" offers a frightening answer to Enrico Fermi's famous paradox about the apparent absence of alien civilizations. "Invisible Enemies, Intelligent Choices" examines the proper role of science in public policy. Running

A unique feature of the proposed volume is that it unravels some new issues in addition to re-examining certain old issues in a new perspective and thus covers wide ranging issues with an emphasis on policy. The book covers issues mostly relating to emerging market economies, which has increasingly assumed importance in the context of globalization. The book contains some survey papers covering the

frontiers of current knowledge on important themes like recent developments in trade theory and empirics, foreign exchange market, institutions in trade and finance, interrelation and interaction between international trade and international finance. The papers, fruit of rigorous and original research, are written by internationally and nationally reputed authors along with promising young researchers on the subjects. The book

substantially contributes to the growing literature on issues relating to trade and international finance in emerging market economies and extends the frontiers of knowledge. The book is expected to have the widest possible readership comprising of advanced undergraduate and graduate students as well as senior researchers working in international trade and international finance. Sustainable mobility has long been sought after in cities around the world, particularly in industrialised countries, but also increasingly in the

emerging cities in Asia. Progress however appears difficult to make as the private car, still largely fuelled by petrol or diesel, remains the mainstream mode of use. Transport is the key sector where carbon dioxide (CO₂) emissions seem difficult to reduce. Transport, Climate Change and the City seeks to develop achievable and low transport CO₂ emission futures in a range of international case studies, including in

Oxides (used both as catalysts and as supports for catalysts), mixed and complex oxides and salts, halides, sulfides, carbides, and unsupported and supported metals are all considered. This book offers a broad and global level description of the current status of wastewater use in agriculture and then brings the readers to various places in the MENA Region and Europe to explain how some countries and regions have addressed the challenges during implementation. On a global scale, over 20 million hectares of agricultural land are irrigated using wastewater. This is one good, and perhaps the most

prominent, example of the safe use potential of wastewater. Water scarcity and the cost of energy and fertilisers are among the main factors driving millions of farmers and other entrepreneurs to make use of wastewater. In order to address the technical, institutional, and policy challenges of safe water reuse, developing countries and countries in transition need clear institutional arrangements and more skilled human resources, with a sound understanding of the opportunities and potential risks of wastewater use. Stakeholders in wastewater irrigation who need to implement from scratch or

As product specifications become more demanding, manufacturers require steel with ever more specific functional properties. As a result, there has been a wealth of research on how those properties emerge during steelmaking.

Fundamentals of metallurgy summarises this research and its implications for manufacturers.

The first part of the book reviews the effects of processing on the properties of metals with a range
