***Hiding in Plain Sight: Eluding the Nazis in Occupied France is an unusual memoir about the childhood and young adulthood of Sarah Lew Miller, a young Jewish girl living in Paris at the time of the Nazi occupation.***

***The aim of this handbook is to provide a comprehensive summary of the field of Particle Science and Technology which includes most updated research findings and their applications in different industries. It is hoped that the consolidated knowledge described by this handbook will inspire more innovative ideas to bring the field forward. The size of the particles may range from nanometer scale, as in pigments or aerosols, to that of mined or quarried materials. The handbook will cover the topics ranging from the formation and synthesis, packing and flow, and application of these particles. Each part is explored in great details in different sections and chapters, it is written by a pool of international well known scholars, as well as industrial experts. The handbook fully reflects the state of the art in Particle Science and Technology***

***the 9th International Workshop on 'Service Oriented, Holonic and Multi-agent Manufacturing Systems for the Industry of the Future' organized by Universitat Politècnica de València, Spain, and held on October 3-4, 2019. The SOHOMA 2019 Workshop aimed to foster innovation in the digital transformation of manufacturing and logistics by promoting new concepts and methods and solutions through service orientation in holonic and agent-based control with distributed intelligence. The book provides insights into the theme of the SOHOMA'19 Workshop - 'Smart anything everywhere - the vertical and horizontal manufacturing integration, ' addressing 'Industry of the Future' (IoF), a term used to describe the 4th industrial revolution initiated by a new generation of adaptive, fully connected, analytical and highly efficient robotized manufacturing systems. This global IoF model describes a new stage of manufacturing, that is fully automatized and uses advanced information, communication and control technologies such as industrial IoT, cyber-physical production systems, cloud manufacturing, resource virtualization, product intelligence, and digital twin, edge and fog computing. It presents the IoF interconnection of distributed manufacturing entities using a***

***'system-of-systems' approach, discussing new types of highly interconnected and self-organizing production resources in the entire value chain; and new types of intelligent decision-making support based on from real-time production data collected from resources, products and machine learning processing. This book is intended for researchers and engineers working in the manufacturing value chain, and specialists developing computer-based control and robotics solutions for the 'Industry of the Future'. It is also a valuable resource for master's and Ph.D. students in engineering sciences programs.***

After ten years of failed struggle as a political and union activist, David Hellman has come home in defeat and humiliation. His older brother Benny, who stayed home and dedicated himself to building a successful business, is all that remains of the family. Although it is David's first night back in the family home, the two brothers rapidly conflict over their opposing world

views. When the spirit of their dead father, Hellman, is raised, Benny and David engage in an exhausting battle over the truth of his life. The audience is confronted with several very different enactments of what happened to Hellman in the concentration camp. Can anything or any situation justify killing? Shall we kill for revenge, in self-defense, for a political ideal, for love?

This new book, beautifully illustrated with a magnificent collection of over 300 photographs, covers the development of a much-loved type of vessel, the 'classic' cross channel or short sea passenger ferry often described as a liner in miniature. From the mid-19th century paddle ferries slowly evolved into screw-driven steamers but it was the advent of the steam turbine and the construction of the railway steamers The Queen and Brighton in 1903 that caught the attention of the world. Similarly-propelled ships multiplied and their use soon spread to the Antipodes, Japan, the Mediterranean and North America. In 1912 Rudolf Diesel's new oil engine went to sea in a cargo ship but it was not until 1925 that it was first employed to widespread acclaim in the Danish North Sea packet Parkeston. In 1934 it made its debut on the English Channel with the Belgian Government's striking 25-knot motor ferry Prins Baudouin. The inexorable increase in car travel from the 1930s led to the development of a new breed of specialised car ferry accessed through bow and stern doors and the proliferation of these after WW2 led to the eventual demise of the 'classic' passenger ferry in the 1960s. With its informative introductory texts and abundant photographs and detailed captions, this book will appeal to ship enthusiasts around the world and to all those who mourn the passing of the golden age of the passenger ship.

The collection of twenty-seven papers published has been grouped into six major categories :

corrosion process characterization and modeling, applications of Kramers-Kronig transformations for evaluating the validity of data, corrosion and its inhibition by either corrosion products of specially added inhibitors, corrosion of aluminum and aluminum alloys, corrosion of steel in soils and concrete, and evaluation of coatings on metal substrates.

"Just Fine is a touching and often hilarious novel that traces the mishaps and misadventures

a conflicted agoraphobe: a woman psychologically restricted to a life indoors but spiritually inclined to wander the meadows, roads, and community beyond the house and river of her youth. In its brilliant collage of river lore, art history, astrology, and mythology France Daigle's rich and witty novel journeys beyond the cultural, psychological, and literary bounds within which its characters live and leads us to where history, fantasy, and memory collide."

This joint report by the International Energy Agency (IEA) and the OECD Nuclear Energy Agency (NEA) is the seventh in a series of studies on electricity generating costs. It presents the latest data available for a wide variety of fuels and technologies.

The special volume offers a global guide to new concepts and approaches concerning the following topics: reduced basis methods, proper orthogonal decomposition, proper generalized decomposition, approximation theory related to model reduction, learning theory and compressed sensing, stochastic and high-dimensional problems, system-theoretic methods, nonlinear model reduction, reduction of coupled problems/multiphysics, optimization and optimal control, state estimation and control, reduced order models and domain decomposition methods, Krylov-subspace and interpolatory methods, and applications to real industrial and complex problems. The book represents the state of the art in the development of reduced order methods. It contains contributions from internationally respected experts, guaranteeing wide range of expertise and topics. Further, it reflects an important effort, carried out over the last 12 years, to build a growing research community in this field. Though not a textbook, some of the chapters can be used as reference materials or lecture notes for classes and tutorials (doctoral schools, master classes).

Swank Rally

The heartbreaking, iconic true story of an abandoned little boy's horrific journey through the American foster care system. On a misty evening in Brooklyn, Jennings Michael Burch's mother, too sick to care for him, left her eight-year-old son at an orphanage with the words, "I'll be right back." She wasn't. Shuttled through a bleak series of foster homes, orphanages, and institutions, Jennings never remained in any of them long enough to make a friend. Instead, he clung to a tattered stuffed animal named Doggie, his sole source of comfort in a frightening world. Here, in his own words, Jennings Michael Burch reveals the abuse and neglect he experienced during his lost childhood. But while his experiences are both shocking and devastating, his story is ultimately one of hope—the triumphant tale of a forgotten child who somehow found the courage to reach out for

love, and found it waiting for him.

"This handbook investigates a variety of ePortfolio uses through case studies, the technology that supports the case studies, and it also explains the conceptual thinking behind current uses as well as potential uses"--Provided by publisher.

The result was a western cultural colonization and the introduction of art-nouveau style, followed by a backlash of nationalism and the development of the "first Turkish national style" of architecture.

Linear Algebra and Matrices: Topics for a Second Course

One of the current main challenges in the area of scientific computing is the design and implementation of accurate numerical models for complex physical systems which are described by time dependent coupled systems of nonlinear PDEs. This volume integrates the works of experts in computational mathematics

and its applications, with a focus on modern algorithms which are at the heart of accurate modeling: adaptive finite element methods, conservative finite difference methods and finite volume methods, and multilevel solution techniques. Fundamental theoretical results are revisited in survey articles and new techniques in numerical analysis are introduced. Applications showcasing the efficiency, reliability and robustness of the algorithms in porous media, structural mechanics and electromagnetism are presented. Researchers and graduate students in numerical analysis and numerical solutions of PDEs and their scientific computing applications will find this book useful.

On May 11, 1998, India began testing nuclear weapons. The world will never be the same. The Indian test of five atomic bombs, and the Pakistani tests that answered a few weeks later, marked the end of the arms control system that has kept the world from nuclear war for half a century. As Paul Bracken, professor of management and political science at Yale University, explains in this landmark study, they signal the reemergence of something the world hasn't seen since the sixteenth century-modern technologically adept military powers on the mainland of Asia. In *Fire in the East*, Professor Bracken reveals several alarming trends and secrets, such as how close Israel actually came to a germ warfare attack during the Gulf War, why "globalization" will spur the development of weapons of

mass destruction, how American interests are endangered by Asian nationalism, and how to navigate what he names the second nuclear age. Fire in the East is a provocative account of how the Western monopoly on modern arms is coming to an end, and how it will forever transform America's role on the stage of international politics.

Winner of the Governor General's Literary Award In this urban adventure story, Khyber, a smart, bold, eleven-year-old girl from a poor neighborhood, sets out to find her friend X, a mysterious homeless woman who has gone missing. The desperate search takes Khyber on a long, all-night odyssey that proves to be wilder than any adventure she has ever imagined.

***The amazing tale of “County” is the story of one of America’s oldest and most unusual urban hospitals. From its inception as a “poor house” dispensing free medical care to indigents, Chicago’s Cook County Hospital has been renowned as a teaching hospital and the healthcare provider of last resort for the city’s uninsured. Ansell covers more than thirty years of its history, beginning in the late 1970s when the author began his internship, to the “Final Rounds” when the enormous iconic Victorian hospital building was replaced. Ansell writes of the hundreds of doctors who underwent rigorous training with him. He writes of politics, from contentious union strikes to battles against “patient dumping,” and public health, depicting the AIDS crisis and the Out of Printening of County’s HIV/AIDS clinic, the first in the city. And finally it is a coming-of-age story for a young doctor set against a backdrOut of Print of race, segregation, and poverty. This is a riveting account.***

***Framed by critical globalisation theory and David Harvey’s ‘co-revolutionary moments’ as a theory of social change, this book brings together a multi-disciplinary team of researchers to empirically analyse how socialism is being constructed in contemporary Latin America and the Caribbean, and beyond. This book uses the case of the Bolivarian Alliance for the Peoples of Our America - Peoples’ Trade Agreement (ALBA-TCP) to invite to a re-thinking of resistance to***

***global capitalism and the construction of socialism in the 21st century. Including detailed theory-based ethnographic case studies from Bolivia, Cuba, El Salvador, Nicaragua, Venezuela and the USA, the contributors identify social and structural forces at different levels and scales to illuminate politics and practices at work. Centred around the themes of democracy and justice, and the more general reconfiguration of the state-society relations and power geometries at the local, national, regional and global scales, ALBA and Counter-Globalization is at the forefront in the trend of interdisciplinary approaches to the study of social phenomena of global relevance. Counter-Globalization and Socialism in the 21st Century will be of interest to students and scholars of Latin American politics, global governance, global regionalisms and rising powers.***

*Linear algebra and matrix theory are fundamental tools for almost every area of mathematics, both pure and applied. This book combines coverage of core topics with an introduction to some areas in which linear algebra plays a key role, for example, block designs, directed graphs, error correcting codes, and linear dynamical systems. Notable features include a discussion of the Weyr characteristic and Weyr canonical forms, and their relationship to the better-known Jordan canonical form; the use of block cyclic matrices and directed graphs to prove Frobenius's theorem on the structure of the eigenvalues of a nonnegative, irreducible matrix; and the inclusion of such combinatorial topics as BIBDs, Hadamard matrices, and strongly regular graphs. Also included are McCoy's theorem about matrices with property P, the Bruck-Ryser-Chowla theorem on the existence of block designs, and an introduction to Markov chains. This book is intended for those who are familiar with the linear algebra covered in a typical first course and are interested in learning more advanced results.*

*The explosion of digital information and communication technologies has influenced almost every aspect of contemporary life. Diasporas in the New Media Age is the first book-length examination of the social use of these technologies by emigrants and diasporas around the world. The eighteen original essays in the book explore the personal, familial, and social impact of modern communication technology on populations of European, Asian, African, Caribbean,*

*Middle Eastern, and Latin American emigrants. It also looks at the role and transformation of such concepts as identity, nation, culture, and community in the era of information technology and economic globalization. The contributors, who represent a number of disciplines and national origins, also take a range of approaches—empirical, theoretical, and rhetorical—and combine case studies with thoughtful analysis. Diasporas in the New Media Age is both a discussion of the use of communication technologies by various emigrant groups and an engaging account of the immigrant experience in the contemporary world. It offers important insights into the ways that dispersed populations are using digital media to maintain ties with their families and homeland, and to create new communities that preserve their culture and reinforce their sense of identity. In addition, the book is a significant contribution to our understanding of the impact of technology on society in general.*

In an era of systemic crisis and of global critiques of the unsustainable perpetuation of capitalism, *Pervasive Powers: The Politics of Corporate Authority* critically questions the conditions for the maintenance and expansion of corporate power. The book explores

empirical case studies in the realms of finance, urban policies, automobile safety, environmental risk, agriculture, and food in western democracies. It renews understanding of the power of big business, focusing on how the study of temporalities, of multi-sited influence and of sociotechnical tools is crucial to an analysis of the evolution of corporate authority. Drawing on different literatures, ranging from research on business associations and global governance to that on the social production of ignorance or on corporate crime, this book aims at contributing to existing works on the capacity of corporations to rule the world. Unlike approaches focused on economic elites and on the political activities of firms, it goes beyond analysis of the power of corporations to influence policy-making to depict their unprecedented capacity to transform and shape the social world. Operating in numerous social spaces and mobilizing a wide range of strategies, corporate organizations have acquired the pervasive power to act far beyond mere spaces of regulation and government. Based on contributions from historians, science and technology studies scholars, sociologists and political scientists, this book will be of great interest to researchers, academics and students who wish to understand how corporations exert a pervasive influence on public policies, and to NGOs and regulatory agencies.

Berlin has triumphed over its own history as a divided city to become one of the most vibrant and thrilling capitals in Europe. Entire districts have been rebuilt in only ten years, making the city a showcase of great architectural achievement. "Living in Berlin" seeks out

both the new and the old of Berlin's most eye-catching attractions from the fabulous eighteenth-century palace of Sans-Souci to breathtaking new buildings designed by moderns like Foster, Starck, and Gehry. This sumptuously illustrated book offers an insider's tour of the city's unique architectural and cultural heritage-and beyond, to the hidden jewels and neglected treasures of the Berlin that most travelers pass by. Living in Berlin pauses at the river and the lakes that lie at the heart of the city, and visits hidden courtyards and market squares. The classic Berlin of Kurt Weill's songs is still there; the voice of Marlene Dietrich still hangs in the smoke-filled bars-if only you know where to look! Living in Berlin also visits cutting-edge contemporary designs for living in the city; from minimalist modern settings to the organized chaos of young artists' studios. The book is completed by details on the best places for excursions and shopping trips, where to eat and where to stay, all selected by true Berliners.
