Wood Finishing: Proven Tips and Tricks That You Need to Know

Wood Finishing; Staining and Polishing and Cellulose Wood Finishes

This book provides a clear, concise presentation of the most significant aspects of indoor air pollution. This volume defines a wide range of indoor air quality problems and solutions. Discussions center around common symptoms and potential environmental and chemical causes, health hazards from arts and crafts and from common household

products, and the impact of common building ventilation problems and how to solve them. Because it is so easy to waste dollars and time when identifying the causes of an indoor air pollution incident, this book presents an expert summary of how to conduct an indoor air pollution survey. Psychological factors of indoor air pollution problems are characterized, and solutions for solving these problems are discussed. The book also covers the role of ergonomic design in office injuries and worker comfort, as well as defines causes and solutions of nuisance noise. Radiation exposure from video display terminals (VDT) is addressed, including topics such as types of radiation and exposure limits.

Wood finishing is one of the biggest bugaboos for many woodworkers. Though they remain undaunted by complex joinery or intricate and precise machining, scores of woodworkers still cringe at the thought of applying a finish to their work. "What's the best finish for my project?" is a question I often hear. Being able to answer that question confidently and comfortably is an important hurdle to overcome. Finishing products can be grouped into manageable categories, based on general working

qualities and the degrees of protection they offer: waxes, oils, varnishes, shellacs, lacquers and water-based finishes. Different finishes offer varying degrees of protection, durability, ease of application, repairability and aesthetics. Unfortunately, no single finish excels in all of these categories - a finish that excels in one may fail in another - so in choosing a finish you must accept trade-offs.

Wood finishing doesn't have to be complicated or confusing. It can be "boiled down" to simple step-by-step instructions. And that's what this book offers; no science, no art, just easily-to-follow directions with lots of pictures to show you every step of the process. Inside, you'll find specific instructions on how to finish common woods using widely-available finishing materials—the kind of wood, stains and finish coats every home center, paint store or hardware store carries. Just match the wood to the final color and result you want. Then follow the step-by-step instructions and eliminate the guesswork. Wood Finishing 101 is by Bob Flexner, who has been writing about and teaching wood finishing to hobbyists and professionals for over 20 years. Let Bob's years of experience guide

you to beautiful results using his easy to understand directions.
