

World History Human Legacy Answers Ch 15

From the very first dog to glowing fish and designer pigs — the human history of remaking nature. Virus-free mosquitoes, resurrected dinosaurs, designer humans — such is the power of the science of tomorrow. But this idea that we have only recently begun to manipulate the natural world is false. We ’ve been meddling with nature since the last ice age. It ’s just that we ’re getting better at it — a lot better. Drawing on decades of research, Beth Shapiro reveals the surprisingly long history of human intervention in evolution through hunting, domesticating, polluting, hybridizing, conserving and genetically modifying life on Earth. Looking ahead to the future, she casts aside the scaremongering myths on the dangers of interference, and outlines the true risks and incredible opportunities that new biotechnologies will offer us in the years ahead. Not only do they present us with the chance to improve our own lives, but they increase the likelihood that we will continue to live in a rich and biologically diverse world.

Discusses the reckless annihilation of fish and birds by the use of pesticides and warns of the possible genetic effects on humans.

Published by OpenStax College, U.S. History covers the breadth of the chronological history of the United States and also provides the necessary depth to ensure the course is manageable for instructors and students alike. U.S. History is designed to meet the scope and sequence requirements of most courses. The authors introduce key forces and major developments that together form the American experience, with particular attention paid to considering issues of race, class and gender. The text provides a balanced approach to U.S. history, considering the people, events and ideas that have shaped the United States from both the top down (politics, economics, diplomacy) and bottom up (eyewitness accounts, lived experience).

"On the day after humans disappear, nature takes over and immediately begins cleaning house - or houses, that is. Cleans them right off the face of the earth. They all go." What if mankind disappeared right now, forever ... what would happen to the Earth in a week, a year, a millennium? Could the planet's climate ever recover from human activity? How would nature destroy our huge cities and our myriad plastics? And what would our final legacy be? Speaking to experts in fields as diverse as oil production and ecology, and visiting the places that have escaped recent human activity to discover how they have adapted to life without us, Alan Weisman paints an intriguing picture of the future of Earth. Exploring key concerns of our time, this absorbing thought experiment reveals a powerful - and surprising - picture of our planet's future.

Discourses on Livy

Translated for the first time into English here, the Latin was translated in the 12th century and into Hebrew in 1279. Henceforth the Canon served as the chief guide to medical science in the West and is said to have influenced Leonardo da Vinci. Its encyclopedic content, its systematic arrangement and philosophical plan soon worked its way into a position of pre-eminence in the medical literature of Europe, displacing the works of Galen and becoming the textbook for medical education in the schools of Europe. The text was read in the medical schools at Montpellier and Leuven as late as 1650. Experimental medicine the Canon of Medicine was the first book dealing with evidence-based medicine, experimental medicine, clinical trials, randomized controlled trials, efficacy tests, risk factor analysis, and the In phytotherapy, the Canon introduced the medicinal use of

Taxus baccata L. He used it as a cardiac remedy. This was the first known use of a calcium channel blocker drug.

The exercises and drills provide hands-on practice for every type of test question. Complete with in-depth reviews for each subject exam: Language Arts, Reading; Language Arts, Writing; Mathematics; Science; and Social Studies.

New York Times Bestseller A Summer Reading Pick for President Barack Obama, Bill Gates, and Mark Zuckerberg From a renowned historian comes a groundbreaking narrative of humanity’s creation and evolution—a #1 international bestseller—that explores the ways in which biology and history have defined us and enhanced our understanding of what it means to be “human.” One hundred thousand years ago, at least six different species of humans inhabited Earth. Yet today there is only one—homo sapiens. What happened to the others? And what may happen to us? Most books about the history of humanity pursue either a historical or a biological approach, but Dr. Yuval Noah Harari breaks the mold with this highly original book that begins about 70,000 years ago with the appearance of modern cognition. From examining the role evolving humans have played in the global ecosystem to charting the rise of empires, Sapiens integrates history and science to reconsider accepted narratives, connect past developments with contemporary concerns, and examine specific events within the context of larger ideas. Dr. Harari also compels us to look ahead, because over the last few decades humans have begun to bend laws of natural selection that have governed life for the past four billion years. We are acquiring the ability to design not only the world around us, but also ourselves. Where is this leading us, and what do we want to become? Featuring 27 photographs, 6 maps, and 25 illustrations/diagrams, this provocative and insightful work is sure to spark debate and is essential reading for aficionados of Jared Diamond, James Gleick, Matt Ridley, Robert Wright, and Sharon Moalem.

Discourses on Livy is the founding document of modern republicanism, and Harvey C. Mansfield and Nathan Tarcov have provided the definitive English translation of this classic work. Faithful to the original Italian text, properly attentive to Machiavelli’s idiom and subtlety of thought, it is eminently readable. With a substantial introduction, extensive explanatory notes, a glossary of key words, and an annotated index, the Discourses reveals Machiavelli’s radical vision of a new science of politics, a vision of “new modes and orders” that continue to shape the modern ethos. “[Machiavelli] found in Livy the means to inspire scholars for five centuries. Within the Discourses, often hidden and sometimes unintended by their author, lie the seeds of modern political thought. . . . [Mansfield and Tarcov’s] translation is careful and idiomatic.”—Peter Stothard, The Times

"Translated with painstaking accuracy—but also great readability."—Weekly Standard "A model of contemporary scholarship and a brave effort at Machiavelli translation that allows the great Florentine to speak in his own voice."—Choice

The Origin and Goal of History

Between the early 1930s and his death in 1953, Joseph Stalin had more than a million of his own citizens executed. This book is the chilling story of these crimes. The book puts forward the argument that mass killings under Stalin in the 1930s were indeed acts of genocide and that the Soviet dictator himself was behind them.

The gripping story of how the end of the Roman Empire was the beginning of the modern world The fall of the Roman Empire has long been considered one of the greatest disasters in history. But in this groundbreaking book, Walter Scheidel argues that Rome’s dramatic collapse was actually the best thing that ever happened, clearing the path for Europe’s economic rise and the creation of the modern age. Ranging across the entire premodern world, Escape From Rome offers new answers to some of the biggest questions in history: Why did the Roman Empire appear? Why did nothing like it ever return to Europe? And, above all, why did Europeans come to dominate the world? In an absorbing narrative that begins with ancient Rome but stretches far beyond it, from Byzantium to China and from Genghis Khan to Napoleon, Scheidel shows how the demise of Rome and the enduring failure of empire-building on European soil launched an economic transformation that changed the continent and ultimately the world.

This resource book is designed to assist teachers in implementing California’s history-social science framework at the 10th grade level. The models support implementation at the local level and may be used to plan topics and select resources for professional development and preservice education. This document provides a link between the framework’s course descriptions and teachers’ lesson plans by suggesting substantive resources and instructional strategies to be used in conjunction with textbooks and supplementary materials. The resource book is divided into eight units: (1) "Unresolved Problems of the Modern World"; (2) "Connecting with Past Learnings: The Rise of Democratic Ideas"; (3) "The Industrial Revolution"; (4) "The Rise of Imperialism and Colonialism: A Case Study of India"; (5) "World War I and Its Consequences"; (6) "Totalitarianism in the Modern World: Nazi Germany and Stalinist Russia"; (7) "World War II: Its Causes and Consequences"; and (8) "Nationalism in the Contemporary World." Each unit contains references. (EH)

What would you give to live forever? Elijah Brighton wants to become an ascender—a post-Singularity human/machine hybrid—after all, they’re smarter, more enlightened, more compassionate, and above all, achingly beautiful. But Eli is a legacy human, preserved and cherished for his unaltered genetic code, just like the rainforest he paints. When a fugue state possesses him and creates great art, Eli miraculously lands a sponsor for the creative Olympics. If he could just master the fugue, he could take the gold and win the right to ascend, bringing everything he’s yearned for within reach... including his beautiful ascender patron. But once Eli arrives at the Games, he finds the ascenders are playing games of their own. Everything he knows about the ascenders and the legacies they keep starts to unravel... until he’s running for his life and wondering who he truly is. The Legacy Human is the first in a philosophical HopePunk sci-fi series that explores the intersection of mind, body, and soul in a post-Singularity world. KEYWORDS: Robots, androids, artificial intelligence, singularity, cyborg, spiritual, religion, AI, cyberpunk, dystopian, free science fiction

This book has been considered by academicians and scholars of great significance and value to literature. This forms a part of the knowledge base for future generations. So that the book is never forgotten we have represented this book in a print format and the same form as it was originally first published. Hence any marks or annotations seen are left intentionally to preserve its true nature.

The gripping, untold story of The International Criminal Tribunal for the former Yugoslavia and how the perpetrators of Balkan war crimes were captured by the most successful manhunt in history Written with a thrilling narrative pull, The Butcher’s Trail chronicles the pursuit and capture of the Balkan war criminals indicted by the International Criminal Tribunal in The Hague. Borger recounts how Radovan Karadžić and Ratko Mladić—both now on trial in The Hague—were finally tracked down, and describes the intrigue behind the arrest of Slobodan Milosevic, the Yugoslav president who became the first head of state to stand before an international tribunal for crimes perpetrated in a time of war. Based on interviews with former special forces soldiers, intelligence officials, and investigators from a dozen countries—most speaking about their involvement for the first time—this book reconstructs a fourteen-year manhunt carried out almost entirely in secret. Indicting the worst war criminals that Europe has known since the Nazi era, the ICTY ultimately accounted for all 161 suspects on its wanted list, a feat never before achieved in political and military history.

Ever since Albert Einstein’s General Theory of Relativity burst upon the world in 1915, some of the world’s most brilliant minds have sought to decipher the mysteries bequeathed by that legacy. Einstein himself was resistant to its implications, but physicists, astronomers and cosmologists have argued over his theory ever since.

#1 NEW YORK TIMES BESTSELLER • More than one million copies sold! A “brilliant” (Lupita Nyong’o, Time), “poignant” (Entertainment Weekly), “soul-nourishing” (USA Today) memoir about coming of age during the twilight of apartheid “Noah’s childhood stories are told with all the hilarity and intellect that characterizes his comedy, while illuminating a dark and brutal period in South Africa’s history that must never be forgotten.”—Esquire Winner of the Thurber Prize for American Humor and an NAACP Image Award • Named one of the best books of the year by The New York Time, USA Today, San Francisco Chronicle, NPR, Esquire, Newsday, and Booklist Trevor Noah’s unlikely path from apartheid South Africa to the desk of The Daily Show began with a criminal act: his birth. Trevor was born to a white Swiss father and a black Xhosa mother at a time when such a union was punishable by five years in prison. Living proof of his parents’ indiscretion, Trevor was kept mostly indoors for the earliest years of his life, bound by the extreme and often absurd measures his mother took to hide him from a government that could, at any moment, steal him away. Finally liberated by the end of South Africa’s tyrannical white rule, Trevor and his mother set forth on a grand adventure, living openly and freely and embracing the opportunities won by a centuries-long struggle. Born a Crime is the story of a mischievous young boy who grows into a restless young man as he struggles to find himself in a world where he was never supposed to exist. It is also the story of that young man’s relationship with his fearless, rebellious, and fervently religious mother—his teammate, a woman determined to save her son from the cycle of poverty, violence, and abuse that would ultimately threaten her own life. The stories collected here are by turns hilarious, dramatic, and deeply affecting. Whether subsisting on caterpillars for dinner during hard times, being thrown from a moving car during an attempted kidnapping, or just trying to survive the life-and-death pitfalls of dating in high school, Trevor illuminates his curious world with an incisive wit and unflinching honesty. His stories weave together to form a moving and searingly funny portrait of a boy making his way through a damaged world in a dangerous time, armed only with a keen sense of humor and a mother’s unconventional, unconditional love.

The Failure of Empire and the Road to Prosperity

Creator of the famous Obedience Experiments and originator of the “six degrees of separation” theory, Stanley Milgram transformed our understanding of human nature and continues to be one of the most important figures in psychology and beyond. In this sparkling biography, Thomas Blass captures the colorful personality and pioneering work of a visionary scientist who revealed the hidden workings of our social world. In this new paperback edition, he includes an afterword connecting Milgram’s theories to torture, war crimes, and Abu Ghraib.

Already a classic of war reporting and now reissued as a Grove Press paperback, Black Hawk Down is Mark Bowden’s brilliant account of the longest sustained firefight involving American troops since the Vietnam War. On October 3, 1993, about a hundred elite U.S. soldiers were dropped by helicopter into the teeming market in the heart of Mogadishu, Somalia. Their mission was to abduct two top lieutenants of a Somali warlord and return to base. It was supposed to take an hour. Instead, they found themselves pinned down through a long and terrible night fighting against thousands of heavily armed Somalis. The following morning, eighteen Americans were dead and more than seventy had been badly wounded. Drawing on interviews from both sides, army records, audiotapes, and videos (some of the material is still classified), Bowden’s minute-by-minute narrative is one of the most exciting accounts of modern combat ever written—a riveting story that captures the heroism, courage, and brutality of battle.

Thucydides, an Athenian, wrote the history of the war between the Peloponnesians and the Athenians, beginning at the moment that it broke out, and believing that it would be a great war and more worthy of relation than any that had preceded it. This belief was not without its grounds. The preparations of both the combatants were in every department in the last state of perfection; and he could see the rest of the Hellenic race taking sides in the quarrel; those who delayed doing so at once having it in contemplation. Indeed this was the greatest movement yet known in history, not only of the Hellenes, but of a large part of the barbarian world-I had almost said of mankind. For though the events of remote antiquity, and even those that more immediately preceded the war, could not from lapse of time be clearly ascertained, yet the evidences which an inquiry carried as far back as was practicable leads me to trust, all point to the conclusion that there was nothing on a great scale, either in war or in other matters.

Christian Bagge, an Iraq War veteran, lost both his legs in a roadside bomb attack on his Humvee in 2006. Months after the accident, outfitted with sleek new prosthetic legs, he jogged alongside President Bush for a photo op at the White House. The photograph served many functions, one of them being to revive faith in an American martial ideal—that war could be fought without permanent casualties, and that innovative technology could easily repair war’s damage. When Bagge was awarded his Purple Heart, however, military officials asked him to wear pants to the ceremony, saying that photos of the event should be “soft on the eyes.” Defiant, Bagge wore shorts. America has grappled with the questions posed by injured veterans since its founding, and with particular force since the early twentieth century: What are the nation’s obligations to those who fight in its name? And when does war’s legacy of disability outweigh the nation’s interests at home and abroad? In Paying with Their Bodies, John M. Kinder traces the complicated, intertwined histories of war and disability in modern America. Focusing in particular on the decades surrounding World War I, he argues that disabled veterans have long been at the center of two competing visions of American war: one that highlights the relative safety of U.S. military intervention overseas; the other indelibly associating American war with injury, mutilation, and suffering. Kinder brings disabled veterans to the center of the American war story and shows that when we do so, the history of American war over the last century begins to look very different. War can no longer be seen as a discrete experience, easily left behind; rather, its human legacies are felt for decades. The first book to examine the history of American warfare through the lens of its troubled legacy of injury and disability, Paying with Their Bodies will force us to think anew about war and its painful costs.

World History, Culture, and Geography

Considered by many the greatest war novel of all time, All Quiet on the Western Front is Erich Maria Remarque’s masterpiece of the German experience during World War I. I am young, I am twenty years old; yet I know nothing of life but despair, death, fear, and fatuous superficiality cast over an abyss of sorrow. . . . This is the testament of Paul Bäumer, who enlists with his classmates in the German army during World War I. They become soldiers with youthful enthusiasm. But the world of duty, culture, and progress they had been taught breaks in pieces under the first bombardment in the trenches. Through years of vivid horror, Paul holds fast to a single vow: to fight against the principle of hate that meaninglessly pits young men of the same generation but different uniforms against one another . . . if only he can come out of the war alive. “The world has a great writer in Erich Maria Remarque. He is a craftsman of unquestionably first rank, a man who can bend language to his will. Whether he writes of men or of inanimate nature, his touch is sensitive, firm, and sure.” —The New York Times Book Review

A riveting, deeply personal account of history in the making—from the president who inspired us to believe in the power of democracy #1 NEW YORK TIMES BESTSELLER • NAACP IMAGE AWARD NOMINEE • NAMED ONE OF THE TEN BEST BOOKS OF THE YEAR BY THE NEW YORK TIMES BOOK REVIEW NAMED ONE OF THE BEST BOOKS OF THE YEAR BY The Washington Post • Jennifer Szalai, The New York Times • NPR • The Guardian • Marie Claire In the stirring, highly anticipated first volume of his presidential memoirs, Barack Obama tells the story of his improbable odyssey from young man searching for his identity to leader of the free world, describing in strikingly personal detail both his political education and the landmark moments of the first term of his historic presidency—a time of dramatic transformation and turmoil. Obama takes readers on a compelling journey from his earliest political aspirations to the pivotal Iowa caucus victory that demonstrated the power of grassroots activism to the watershed night of November 4, 2008, when he was elected 44th president of the United States, becoming the first African American to hold the nation’s highest office. Reflecting on the presidency, he offers a unique and thoughtful exploration of both the awesome reach and the limits of presidential power, as well as singular insights into the dynamics of U.S. partisan politics and international diplomacy. Obama brings readers inside the Oval Office and the White House Situation Room, and to Moscow, Cairo, Beijing, and points beyond. We are privy to his thoughts as he assembles his cabinet, wrestles with a global financial crisis, takes the measure of Vladimir Putin, overcomes seemingly insurmountable odds to secure passage of the Affordable Care Act, clashes with generals about U.S. strategy in Afghanistan, tackles Wall Street reform, responds to the devastating Deepwater Horizon blowout, and authorizes Operation Neptune’s Spear, which leads to the death of Osama bin Laden. A Promised Land is extraordinarily intimate and introspective—the story of one man’s bet with history, the faith of a community organizer tested on the world stage. Obama is candid about the balancing act of running for office as a Black American, bearing the expectations of a generation buoyed by messages of “hope and change,” and meeting the moral challenges of high-stakes decision-making. He is frank about the forces that opposed him at home and abroad, open about how living in the White House affected his wife and daughters, and unafraid to reveal self-doubt and disappointment. Yet he never wavers from his belief that inside the great, ongoing American experiment, progress is always possible. This beautifully written and powerful book captures Barack Obama’s conviction that democracy is not a gift from on high but something founded on empathy and common understanding and built together, day by day.

Lying on the border between eastern and western Christendom, Orthodox Karelia preserved its unique religious culture into the 19th and 20th centuries, when it was described and recorded by Finnish and Karelian folklore collectors. This colorful array of ritulas and beliefs involving nature spirits, saints, the dead, and pilgrimage to monasteries represented a unique fusion of official Church ritual and doctrine and pre-Christian ethnic folk belief. This book undertakes a fascinating exploration into many aspects of Orthodox Karelian ritual life: beliefs in supernatural forces, folk models of illness, body concepts, divination, holy icons, the role of the ritual specialist and healer, the divide between nature and culture, images of forest, the cult of the dead, and the popular image of monasteries and holy hermits. It will appeal to anyone interested in popular religion, the cognitive study of religion, ritual studies, medical anthropology, and the folk traditions and symbolism of the Balto-Finnic peoples.

Karl Jaspers (1883-1969) was a German psychiatrist and philosopher and one of the most original European thinkers of the twentieth century. As a major exponent of existentialism in Germany, he had a strong influence on modern theology, psychiatry and philosophy. He was Hannah Arendt’s supervisor before her emigration to the United States in the 1930s and himself experienced the consequences of Nazi persecution. He was removed from his position at the

University of Heidelberg in 1937, due to his wife being Jewish. Published in 1949, the year in which the Federal Republic of Germany was founded, The Origin and Goal of History is a vitally important book. It is renowned for Jaspers' theory of an 'Axial Age', running from the 8th to the 3rd century BCE. Jaspers argues that this period witnessed a remarkable flowering of new ways of thinking that appeared in Persia, India, China and the Greco-Roman world, in striking parallel development but without any obvious direct cultural contact between them. Jaspers identifies key thinkers from this age, including Confucius, Buddha, Zarathustra, Homer and Plato, who had a profound influence on the trajectory of future philosophies and religions. For Jaspers, crucially, it is here that we see the flowering of diverse philosophical beliefs such as scepticism, materialism, sophism, nihilism, and debates about good and evil, which taken together demonstrate human beings' shared ability to engage with universal, humanistic questions as opposed to those mired in nationality or authoritarianism. At a deeper level, The Origin and Goal of History provides a crucial philosophical framework for the liberal renewal of German intellectual life after 1945, and indeed of European intellectual life more widely, as a shattered continent attempted to find answers to what had happened in the preceding years. This Routledge Classics edition includes a new Foreword by Christopher Thornhill.

We all love stories--whether printed, passed down orally from generation to generation, or made into films. We love stories whether they are fictional, true, mythical, or legendary. Stories are part of our human history, and they help us understand being human. But there is one story that underpins all other stories--the story of why we exist. All great human stories must interact with this story. His Story explores this fundamental story by retelling the story of the Bible. His Story tells the Biblical story of how God has opened up a doorway into our universe and how this impacts the metanarrative of all of our lives. If you want to read the overarching story of the Bible in one short book, then His Story is for you. If you want to know the backstory of your life, His Story is for you. His Story is simply written, but doesn't oversimplify. It is a book for people who might call themselves Christians, but also for all those who are curious about the ultimate story. His Story--the story of why we are here.

Nostradamus, or Michel de Nostredame, was a physician and astrologer during the time of the Black Death. His most famous book "Les Prophéties," or "the Prophecies," was first published in 1555. Some scholars believe that, in this volume, he predicted a number of world events, such as the rise of Napoleon and the death of Hitler, and that it also predicts the coming of the Antichrist and the end of the world. This volume contains annotations and parallel texts. A modern English translation accompanies the original, Mediaeval French—the language in which Nostradamus originally wrote his prophecies—, helping the reader to understand both the original language and the translation of this critical work of eschatology. This edition also contains fragments of the questionable 11th and 12th centuries.

Holt Economics examines the way in which economics affects the lives of individuals and how individuals, through their economic choices, shape their world. Throughout Holt Economics, you are asked to think critically about the events and processes that shape your global, national, and local economy. - Publisher.

World History: Cultures, States, and Societies to 1500 offers a comprehensive introduction to the history of humankind from prehistory to 1500. Authored by six USG faculty members with advance degrees in History, this textbook offers up-to-date original scholarship. It covers such cultures, states, and societies as Ancient Mesopotamia, Ancient Israel, Dynastic Egypt, India's Classical Age, the Dynasties of China, Archaic Greece, the Roman Empire, Islam, Medieval Africa, the Americas, and the Khanates of Central Asia. It includes 350 high-quality images and maps, chronologies, and learning questions to help guide student learning. Its digital nature allows students to follow links to applicable sources and videos, expanding their educational experience beyond the textbook. It provides a new and free alternative to traditional textbooks, making World History an invaluable resource in our modern age of technology and advancement.

Black Holes and Time Warps

Today, war is more complicated than it has ever been. When considering military strategy, a commander must be aware of several theaters of war. There's ground strength, air power, naval combat and even cyber warfare. In the late 19th century, however, the true military might of a nation rested primarily on the strength of its navy. In 1890, United States Navy Captain Alfred Thayer Mahan published a book titled "The Influence of Sea Power Upon History." The monumental text addressed the importance of both military and commercial fleets in the success of a nation in war and peacetime. Mahan begins with a discussion of the elements he considers to be the key to a nation's success on the seas. He theorizes that a ground force could not sustain the pressure of a naval blockade. Mahan then applies his principles to wars of the past. He analyzes the use of a navy in various engagements and considers the resulting influence on the outcome of the wars. The book was readily accepted by commanders and tacticians all over the world and his principles and theories were utilized throughout the 20th century. His arguments, along with technological advances, were influential in the strengthening of the United States Navy. Presently, Mahan's work is considered the most important work on naval strategy in history. Chronicles the Nazi's rise to power, conquest of Europe, and dramatic defeat at the hands of the Allies.

World history has expanded dramatically in recent years, primarily as a teaching field, and increasingly as a research field. Growing numbers of teachers and Ph.Ds in history are required to teach the subject. They must be current on topics from human evolution to industrial development in Song-dynasty China to today's disease patterns - and then link these disparate topics into a coherent course. Numerous textbooks in print and in preparation summarize the field of world history at an introductory level. But good teaching also requires advanced training for teachers, and access to a stream of new research from scholars trained as world historians. In this book, Patrick Manning provides the first comprehensive overview of the academic field of world history. He reviews patterns of research and debate, and proposes guidelines for study by teachers and by researchers in world history.

More than three decades after its first publication, Edward Said's groundbreaking critique of the West's historical, cultural, and political perceptions of the East has become a modern classic. In this wide-ranging, intellectually vigorous study, Said traces the origins of "orientalism" to the centuries-long period during which Europe dominated the Middle and Near East and, from its position of power, defined "the orient" simply as "other than" the occident. This entrenched view continues to dominate western ideas and, because it does not allow the East to represent itself, prevents true understanding. Essential, and still eye-opening, Orientalism remains one of the most important books written about our divided world.

A strikingly original exploration of what it might mean to be authentically human in the age of artificial intelligence, from the author of the critically-acclaimed Interior States. "Meghan O'Gieblyn is a brilliant and humble philosopher, and her book is an explosively thought-provoking, candidly personal ride I wished never to end ... This book is such an original synthesis of ideas and disclosures. It introduces what will soon be called the O'Gieblyn genre of essay writing." —Heidi Julavits, author of The Folded Clock For most of human history the world was a magical and enchanted place ruled by forces beyond our understanding. The rise of science and Descartes's division of mind from world made materialism our ruling paradigm, in the process asking whether our own consciousness—i.e., souls—might be illusions. Now the inexorable rise of technology, with artificial intelligences that surpass our comprehension and control, and the spread of digital metaphors for self-understanding, the core questions of existence—identity, knowledge, the very nature and purpose of life itself—urgently require rethinking. Meghan O'Gieblyn tackles this challenge with philosophical rigor, intellectual reach, essayistic verve, refreshing originality, and an ironic sense of contradiction. She draws deeply and sometimes humorously from her own personal experience as a formerly religious believer still haunted by questions of faith, and she serves as the best possible guide to navigating the territory we are all entering.
